Foreword

The NORSOK standards are developed by the Norwegian petroleum industry to ensure adequate safety, value adding and cost effectiveness for petroleum industry developments and operations. Furthermore, NORSOK standards are as far as possible intended to replace oil company specifications and serve as references in the authorities’ regulations.

The NORSOK standards are normally based on recognised international standards, adding the provisions deemed necessary to fill the broad needs of the Norwegian petroleum industry. Where relevant, NORSOK standards will be used to provide the Norwegian industry input to the international standardisation process. Subject to development and publication of international standards, the relevant NORSOK standard will be withdrawn.

The NORSOK standards are developed according to the consensus principle generally applicable standards work and according to established procedures defined in NORSOK A-001.

The NORSOK standards are prepared and published supported by The Norwegian Oil Industry Association (OLF) and Federation of Norwegian Manufacturing Industries (TBL).

NORSOK standards are administered and published by Standards Norway.

Introduction

The provision of the NORSOK standards are intended to comply with the requirements of the EC “Pressure Equipment Directive” and the Norwegian implementation regulation “Forskrift for trykkpåkjent utstyr” issued 9 June 1999. When this NORSOK standard refers to PED only, it is implicit that it also refers to the Norwegian implementation regulation. In those applications where PED is governing, it is therefore necessary to apply the PED and to involve a notified body to obtain the required approvals dependent of the selected conformity assessment module applicable to each specific project.

An objective has been to facilitate and standardise the implementation of PED requirement for the Norwegian petroleum industry. The correct implementation of these requirements or any other requirement is left with the user of the MDSes.

This revision replace NORSOK standard M-630 rev 3. Revision 4 of this NORSOK standard is an update to include changes deemed necessary due to:

- Introduction of PED
- Changes made in the reference standards
- Experiences gained with the previous revision of the standard
- Deletion of the MDS P01, this due to the issue of ISO 14692

The MDSes under material type K (Cu/Ni 90/10) and type X (high strength low-alloyed steel) are not revised in this issue of this NORSOK standard.

The basis for the requirements included in the MDSes are fulfilment of the requirements deemed necessary for piping systems classified to PED category III. The PED specific requirements for materials to be used for pressure equipment are related to the following:

- No less than 14% elongation and no less than 27 J absorbed energy measured on Charpy V-notch at the lowest scheduled operating temperature
- Approval of welders and welding procedures by a 3rd party organization recognized an EC member state for Category II-IV.
- Approval of NDT operators for Category III-IV by a 3rd party organization recognized an EC member state
- Certification of specific product control.

The minimum elongation requirement is included unless covered by the reference standard. The minimum Charpy V-notch absorbed energy for carbon steel type 235 is implemented by limiting the carbon content to ≤ 0.20 % and CE_{(IIW)} = C + Mn/6 + (Cr+Mo+V)/5 + (Cu+Ni)/15 ≤ 0.43, with reference to Guideline 7/17. The
use of this material type is in the NORSOK L-001 Pipe and Valve specification, limited to piping systems with minimum design temperature of -15°C (due to ambient conditions) and to a maximum wall thickness of < 16 mm.

The other requirements are included as deemed relevant on MDSes in the material Type C-, D-, N-, R- and S-serie except for MDSes for tubes to A 269/A 789. Tubes to A 269/A 789 are within the NORSOK standards not specified used in pressure equipment in Category II-IV.

The MDSes for Titanium Grade 2 are not prepared to comply with PED category II-IV requirements. The Titanium grade 2 (MDS T-01/-02) are only intended used for piping systems classified to SEP or Category I. The MDS for Cu/Ni material K-01/-02 are not specified used within the NORSOK standards, but are established as an optional material for seawater systems.

Polymer products specified by the MDSes in the P-serie are not classified as pressure bearing parts.

When any MDS is used for applications not covered by PED or to SEP and category I, those specific PED requirements listed above need not be applied as mandatory.
1 Scope
This NORSOK standard includes material requirement in a collection of Material Data Sheets (MDS) for use in piping systems, selected according to NORSOK L-001, Piping and Valves.

2 Terms, definitions and abbreviations

2.1 Terms and definitions
For the purposes of this NORSOK standard, the following terms and definitions apply.

2.1.1 shall
verbal form used to indicate requirements strictly to be followed in order to conform to the standard and from which no deviation is permitted, unless accepted by all involved parties

2.1.2 should
verbal form used to indicate that among several possibilities one is recommended as particularly suitable, without mentioning or excluding others, or that a certain course of action is preferred but not necessarily required

2.1.3 may
verbal form used to indicate a course of action permissible within the limits of the standard

2.1.4 can
verbal form used for statements of possibility and capability, whether material, physical or casual.

2.1.5 carbon steel type 235
carbon steel with SMYS \(\geq 220\) MPa and not impact tested

2.1.6 carbon steel type 235LT
carbon steel with SMYS \(\geq 220\) MPa and impact tested at - 46 °C

2.1.7 carbon steel type 360LT
carbon steel with SMYS \(\geq 350\) MPa and impact tested at - 46 °C

2.1.8 stainless steel type 316
austenitic stainless steel alloys with approx. 2.5 % Mo of type AISI 316

2.1.9 stainless steel type 6Mo
austenitic stainless steel alloys with 6 % Mo and PRE \(\geq 40\)

2.1.10 stainless steel type 22Cr duplex
ferritic/austenitic stainless steel alloys with 22 % Cr e.g. UNS S31803

2.1.11 stainless steel type 25Cr duplex
ferritic/austenitic stainless steel alloys with 25 % Cr and PRE \(\geq 40\), often also referred to as "super duplex". |

3 Collection of material data sheets

3.1 General

Materials/components manufactured in accordance with M-630 rev. 2 and 3 may be accepted. This shall be agreed with the actual project/company.

The material selection menu for material standards and grades relevant for the piping systems is shown in Table 1. The actual grades to be used with respect to piping design shall be stated on the piping class sheet in the respective project Piping & Valve specification.

The materials shall be delivered in accordance with the standard referred to. In addition the MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

The actual types of materials covered are as follow:

C - Carbon steels; Type 235, Type 235LT, Type 360LT
D - Ferritic/Austenitic Stainless Steels; Type 22Cr, Type 25Cr
K - Copper/Nickel 90/10 and other copper alloys
N - Nickel base alloys; Type 625
P - Polymers including fibre reinforced
R - Austenitic Stainless Steels; Type 6Mo
S - Austenitic Stainless Steels; Type 316
T - Titanium
X - High strength low alloyed steels.

Note: Welded products according to MDS D42, D43, D52, D53, R12, R13, S01 and T01 have acceptance classes, which give welding factors 0.8 and 1.0. The correct class is specified on the piping class sheet. The order shall include acceptable classes.

3.2 Deviations from ASME B31.3 code requirements

The use of the piping materials according to NORSOK Standards (L-001, M-630 and M-601) will result in some minor deviations from the ASME B31.3 code. All deviations have been carefully considered, and they are in line with Norwegian and European practice. The deviations are:

- NORSOK have of practical reasons limited the thickness for requiring impact testing to 6 mm
- If sub-size Charpy V-notch impact test specimens are used, the energy requirement is increased instead of lowering the test temperature.
- Eddy current examination is accepted as replacement for spot radiography of stainless steel welds for wall thickness less than 4.0 mm.
- Thin walled (thickness up to 7 mm) longitudinal welded pipes in 6 Mo austenitic stainless is accepted in as welded condition provided the plate material used is solution annealed.

In general, the MDS have supplementary requirement beyond the ASTM standard to ensure a safe use of the material grades.

## 1. SCOPE

This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

## 2. MANUFACTURING PROCESS

**Welded pipes to API 5L:** Pipes shall be made by the submerged arc welding process adding filler material. Electric resistance welded pipes are not acceptable.

**All welded products:** Welding shall be carried out by qualified welders according to qualified procedures approved by a 3rd party organization recognized by an EC member State.

## 3. HEAT TREATMENT

**Welded pipes to API 5L:** Stress relieving when the nominal thickness t ≥ 19 mm.

## 4. CHEMICAL COMPOSITION

C ≤ 0.20 %; Si ≥ 0.10 %; Mn = 0.50 - 1.35%; S ≤ 0.025 %; P ≤ 0.030 %;  
CE(HWW) = C + Mn/6 + (Cr+Mo+V)/5 + (Cu+Ni)/15 ≤ 0.43.

## 5. MECHANICAL PROPERTIES

**Welded pipes to API 5L:** A5 > 22% (long.), 16% (transv.)

**Seamless pipes to A 106:** A5 (Transverse) > 14 %

## 6. TEST SAMPLING

Samples for production testing shall realistically reflect the properties in the actual component.

## 7. NON DESTRUCTIVE TESTING

**Pipes to API 5L:** RT of weld seam or RT at ends and US/Eddy Current of the remaining weld.

**Fittings to A 234:** UT is not acceptable as replacement of RT.

**All products:** NDT operator qualification shall be approved by a 3rd party organization recognized by an EC member state.

## 8. REPAIR OF DEFECTS

Weld repair of base material is not acceptable.

## 9. CERTIFICATION

Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

</tbody>
</table>

1. SCOPE
This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

2. CHEMICAL COMPOSITION
C ≤ 0.20 % and CE(IIW) = C + Mn/6 + (Cr+Mo+V)/5 + (Cu+Ni)/15 ≤ 0.43 for castings with butt weld ends.

3. EXTENT OF TESTING
One set of tensile test is required for each melt and heat treatment load.

4. TEST SAMPLING
Samples for mechanical testing shall realistically reflect the properties in the actual components.
For castings with weight 250 kg and above the test blocks shall be integrally cast with the casting. The test blocks shall be heat treated together with the castings they represents.

5. NON DESTRUCTIVE TESTING
Magnetic particle testing: Supplementary requirement S4 shall apply to all surfaces (including internal surfaces) of all castings. The examination shall be carried out after final machining. The acceptance criteria shall be ASME VIII, Div.1, Appendix 7.
Radiographic testing: Supplementary requirement S5 shall apply to:
- Critical areas as per ANSI B16.34 of the pilot cast of each pattern
- All butt weld ends of each casting.
- Class 1500 psi and above; all critical areas according to ANSI B16.34 of each casting.
- The acceptance criteria shall be to ASME VIII, Div. 1, Appendix 7.

NDT operator qualification shall be approved by a 3rd party organization recognized by an EC member state.

6. REPAIR OF DEFECTS
Welding shall be carried out by qualified welders according to qualified procedures approved by a 3rd party organization recognized by an EC member State.

7. CERTIFICATION
Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

1. **SCOPE**
   - This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

2. **MANUFACTURING PROCESS**
   - All welded products: Welding shall be carried out by qualified welders according to qualified procedures approved by a 3rd party organization recognized by an EC member State.

3. **CHEMICAL COMPOSITION**
   - C ≤ 0.20 %; Mn = 0.50 - 1.55 %; S ≤ 0.025 %; P ≤ 0.030 %; CE(IIW long formula) = C + Mn/6 + (Cr+Mo+V)/5 + (Cu+Ni)/15 ≤ 0.43.
   - Seamless pipes to A 333: Cr ≤ 0.40, Ni ≤ 0.40, Mo ≤ 0.15, Cu ≤ 0.40, Nb ≤ 0.010 V ≤ 0.08

4. **IMPACT TESTING**
   - Charpy V-notch testing at -46°C is required for the thickness > 6 mm. For flanges apply the thickness at the weld neck. The minimum absorbed energy for full size specimens shall be 27 J average and 20 J single. Reduction factors for sub-size specimens shall be: 7.5mm - 5/6 and 5 mm - 2/3.

5. **EXTENT OF TESTING**
   - Fittings to A 420: Supplementary requirement ASTM A 960, S51 shall apply. Impact testing shall be carried out to the same extent as tensile testing.
   - Pipes to A 671: Supplementary requirement S2 shall apply to the same extent as for tensile testing.
   - Forgings to A 350: One set of tensile and impact testing shall be carried out for each heat and heat treatment load. A test lot shall not exceed 2000 kg for forgings with as forged weight ≤ 50 kg, and 5000 kg for forgings with as forged weight > 50 kg.

6. **TEST SAMPLING**
   - All products: Samples for production testing shall realistically reflect the properties in the actual component.
   - Forgings to A 350: Sketches shall be established showing type, size and location of test samples and extraction of test specimens.

#### 7. NON DESTRUCTIVE TESTING

**Fittings to A 420:** Ultrasonic testing is not acceptable as replacement of radiographic testing.

Supplementary requirement ASTM A 960, S53 and S69, magnetic particle testing, shall apply to 10% of all fittings (same test lot as defined for mechanical testing) for nominal thickness < 12.7 mm and 100% of all fittings for nominal thickness ≥ 12.7 mm. The testing shall be carried out after calibration. The acceptance criteria shall be to ASME VIII, Div. 1, Appendix 6.

**Forgings to A 350:** Supplementary Requirement ASTM A 961, S55, magnetic particle testing shall apply to 10% of all forgings (same test lot as defined for mechanical testing) with NPS > 2. The testing shall be carried out after final machining. The acceptance criteria shall be to ASME VIII, Div. 1, Appendix 6.

**All products:** NDT operator qualification shall be approved by a 3rd party organization recognized by an EC member state.

#### 8. REPAIR OF DEFECTS

Weld repair of base material is not acceptable.

#### 9. MARKING

Heat treatment load number shall be permanently marked on the component where testing is required per heat treatment load.

#### 10. CERTIFICATION

Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.
# NORSOK Standard

## MATERIAL DATA SHEET

<td>-</td>
<td>S4, S5</td>
</tr>
</tbody>
</table>

### 1. SCOPE
This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

### 2. CHEMICAL COMPOSITION
- C ≤ 0.22 %; S ≤ 0.025 %; P ≤ 0.030 %;
- \( CE = C + \frac{Mn}{6} + \frac{(Cr+Mo+V)}{5} + \frac{(Cu+Ni)}{15} \leq 0.43 \)

### 3. IMPACT TESTING
The minimum absorbed energy for full size specimens shall be 27 J average and 20 J single.

### 4. EXTENT OF TESTING
- One set of tensile and impact test is required for each melt and heat treatment load.
- A test lot shall not exceed 5 000 kg.

### 5. TEST SAMPLING
- Samples for mechanical testing shall realistically reflect the properties in the actual components. Thickness of the test block shall be equal to the thickness of the actual components as heat treated up to a maximum thickness of 100 mm. For flanged components the largest flange thickness apply.
- Test specimens shall be cut from the 1/4 T location from the surface where T is the thickness of the test block.
- Test block shall be integrally cast or gated onto the castings and shall not be removed from the castings until after the final quality heat treatment.

### 6. NON DESTRUCTIVE TESTING
- **Magnetic Particle testing:** Supplementary requirement S4 shall apply to all surfaces (including internal surfaces) of all castings. The testing shall be carried out after final machining. The acceptance criteria shall be to ASME VIII, Div. 1, Appendix 7.

- **Radiographic testing:** Supplementary requirement S5 shall apply to:
  - Critical areas as per ANSI B16.34 of the pilot cast of each pattern.
  - All butt weld ends of each casting.
  - Class 1500 psi and above; all critical areas to ANSI B16.34 of each casting.
  - The acceptance criteria shall be to ASME VIII, Div. 1, Appendix 7.

- NDT operator qualification shall be approved by a 3rd party organization recognized by an EC member state.

### 7. REPAIR OF DEFECTS
- A cast plate shall be used in the qualification of the repair welding procedure.
- Welding shall be carried out by qualified welders according to qualified procedures approved by a 3rd party organization recognized by an EC member state.

### 8. MARKING
- The component shall be marked to ensure full traceability to melt and heat treatment lot.

### 9. CERTIFICATION
- Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.
- Heat treatment temperature, soaking time and cooling medium shall be stated in the certificate.

<td>Seamless and welded</td>
<td></td>
</tr>
<tr>
<td>Forgings</td>
<td>ASTM A 694</td>
<td>F52</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**1. SCOPE**

This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

**2. CHEMICAL COMPOSITION**

\[
\begin{align*}
C & \leq 0.20 \%; \\
Mn & = 0.90 - 1.60 \%; \\
S & \leq 0.025 \%; \\
P & \leq 0.035 \%; \\
Ti & \leq 0.05 \%; \\
Nb & \leq 0.04 \%; \\
Al & \leq 0.06 \%; \\
N & \leq 0.015 \%; \\
V+Nb+Ti & \leq 0.10 \%; \\
V+Nb & \leq 0.07. \\
\text{CE} & = C + Mn/6 + (Cr+Mo+V)/5 + (Cu+Ni)/15 \leq 0.43.
\end{align*}
\]

**3. IMPACT TESTING**

Charpy V-notch testing according to ASTM A 370 at -46 °C is required for the thickness \( \geq 6 \) mm. The minimum absorbed energy for full size specimen shall be 40 J average and 30 J single. Reduction factors for sub-size specimens shall be: 7.5 mm - 5/6 and 5 mm - 2/3.

**4. EXTENT OF TESTING**

Forgings:

One set of tensile and impact testing shall be carried out for each heat and heat treatment load. The testing shall be carried out on the component with heaviest wall thickness within the load. A test lot shall not exceed 2000 kg for forgings with as forged weight \( \leq 50 \) kg, and 5000 kg for forgings with as forged weight \( > 50 \) kg.

**5. TEST SAMPLING**

All products:

Samples for production testing shall realistically reflect the properties in the actual component.

Forgings:

Test samples shall be from prolongations on actual components. Sacrificial forgings shall be used for die-forged components. However, special agreements may be made for die-forged components with as forged weight exceeding 50 kg.

Test location and orientation shall be:

- For forgings having maximum section thickness, \( T \leq 50 \) mm, the test specimens shall be taken at mid thickness and its mid length shall be at least 50 mm from any second surface.
- For forgings having maximum section thickness, \( T > 50 \) mm, the test specimen shall be taken at least \( \frac{1}{4} T \) from the nearest surface and at least \( T \) or 100 mm, whichever is less, from any second surface.

Sketches shall be established showing type, size and location of test samples and extraction of test specimens.

**6. WELDING**

Forgings to A 860:

Welding shall be carried out by qualified welders according to qualified procedures approved by a 3rd party organization recognized by an EC member State. The WPQ shall be qualified in accordance with ASME IX or EN 288-3.

**7. NON DESTRUCTIVE TESTING**

All products:

The acceptance criteria shall be to ASME VIII Div. 1, Appendix 6. NDT operator qualification shall be approved by a 3rd party organization recognized by an EC member state.

Forgings to A 694:

10 % of all forgings with NPS > 2 (same test lot as defined for mechanical testing) shall be magnetic particle testing according to ASME V Article 7. The testing shall be carried out after final machining.

8. **REPAIR OF DEFECTS**
Weld repair of base material is not acceptable.

9. **MARKING**
The component shall be marked to ensure full traceability to melt and heat treatment lot.

10. **CERTIFICATION**
Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.
### 1. SCOPE
This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

### 2. STEEL MAKING
Fine grain treatment shall be carried out.

### 3. HEAT TREATMENT
Normalised or Quenched and Tempered.

### 4. CHEMICAL COMPOSITION
\[
C \leq 0.16 \%; \ M_n = 0.90 - 1.60 \%; \ Si = 0.10-0.50 \%; \ Ti \leq 0.05 \%; \ Nb \leq 0.04 \%; \ Al \leq 0.06 \%; \ N \leq 0.015 \%; \ V+Nb+Ti \leq 0.10 \%; \ V+Nb \leq 0.07 \%; \ CE_{(IIW)} = C + Mn/6 + (Cr+Mo+V)/5 + (Cu+Ni)/15 \leq 0.43.
\]

### 5. TENSILE TESTING
\[A_5 > 22\% \text{ (long.), } 16\% \text{ (transv.)}\]

### 6. IMPACT TESTING
Charpy V-notch testing according to ASTM A 370 at -46 °C is required for the thickness \( \geq 6 \) mm. The minimum absorbed energy for full size specimens shall be 40 J average and 30 J single. Reduction factors for sub-size specimens shall be: 7.5 mm - 5/6 and 5 mm - 2/3.

### 7. TEST SAMPLING
Samples for production testing shall realistically reflect the properties in the actual component.

### 8. NON DESTRUCTIVE TESTING
Supplementary requirement SR 4.3 with notch calibration of 5 % of the nominal wall thickness shall apply for all thickness.

### 9. SURFACE FINISH
The surface finish shall comply with ASTM A 106 para. 18.3.2.

### 10. REPAIR OF DEFECTS
Weld repair is not acceptable.

### 11. CERTIFICATION
Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.
# NORSOK Standard

<td>UNS S 31803</td>
<td>-</td>
</tr>
<tr>
<td></td>
<td></td>
<td>UNS S 32205</td>
<td>-</td>
</tr>
</tbody>
</table>

### 1. SCOPE

This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

### 2. QUALIFICATION

Manufacturers of product to this MDS shall comply with the requirement of NORSOK Standard M-650.

### 3. STEEL MAKING

The steel melt shall be refined with AOD or equivalent.

### 4. CHEMICAL COMPOSITION

N = 0.14 - 0.20 %

### 5. HARDNESS

The hardness shall be maximum 28 HRC or alternatively 271 HB or 290 HV10.

### 6. IMPACT TESTING

Charpy V-notch testing (3 specimens) according to ASTM A 370 at - 46 °C is required for the thickness \( \geq 6 \) mm. The minimum absorbed energy shall be 45 J average / 35 J single. Reduction factors for sub-size specimens shall be: 7.5 mm - 5/6 and 5 mm - 2/3.

### 7. MICROGRAPHIC EXAMINATION

The micrographic examination shall cover the near surfaces and mid-thickness region of the pipe. The ferrite content shall be determined according to ASTM E 562 or equivalent and shall be within 35-55 %. The microstructure, as examined at 400 X magnification on a suitably etched specimen, shall be free from intermetallic phases and precipitates.

### 8. EXTENT OF TESTING

Charpy V-notch impact, microstructure, hardness and tensile testing shall be carried out for each lot as defined in the referred standard. For batch furnace charges the specified tests shall be carried out for each heat treatment charge.

### 9. TEST SAMPLING

Samples for production testing shall realistically reflect the properties in the actual components.

### 10. SURFACE FINISH

White pickled.

### 11. REPAIR OF DEFECTS

Weld repair is not acceptable.

### 12. MARKING

The component shall be marked to ensure full traceability to melt and heat treatment lot.

### 13. CERTIFICATION

Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials. Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.

<td></td>
<td>UNS S32205</td>
</tr>
</tbody>
</table>

1. SCOPE
This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

2. QUALIFICATION
Manufacturers of product to this MDS shall comply with the requirement of NORSOK standard M-650.

3. STEEL MAKING
The steel melt shall be refined with AOD or equivalent.

4. MANUFACTURING PROCESS
Welding shall be carried out by qualified welders according to qualified procedures approved by a 3rd party organization recognized by an EC member State.

4. HEAT TREATMENT
The pipes shall be solution annealed followed by water quenching.

5. CHEMICAL COMPOSITION
N = 0.14 - 0.20 %

6. TENSILE TESTING
Base material properties: $R_{p0.2} \geq 450$ MPa; $R_m \geq 620$ MPa; $A_5 \geq 25$ %.

7. HARDNESS
The hardness shall be maximum 28 HRC or alternatively 271 HB or 290 HV10 for base material, HAZ and weld metal.

8. IMPACT TESTING
Charpy V-notch testing according to ASTM A 370 at -46 °C is required for the thickness $\geq 6$ mm. The minimum absorbed energy shall be 45 J average and 35 J single. Two sets, each 3 specimen, shall be carried out with notch located in weld metal and fusion line, respectively. Reduction factors for sub-size specimens shall be: 7.5 mm - 5/6 and 5 mm - 2/3.

9. MICROGRAPHIC EXAMINATION
The micrographic examination shall cover the near surfaces and mid-thickness region of the pipe including the weld zone. The ferrite content shall be determined according to ASTM E 562 or equivalent and shall be within 35-55 % for base material and 35-65 % for weld metal. The microstructure, as examined at 400 X magnification on a suitably etched specimen, shall be free from intermetallic phases and precipitates.

10. EXTENT OF TESTING
Tensile test, impact test, hardness test and microstructure examination shall be carried out for each lot. The lot is defined as follows:
- For batch furnace a lot is defined as maximum 60 m of pipe of the same heat, size and heat treatment charge.
- For continuous heat treatment furnace the lot definition in para 8.1 of the ASTM standard apply.

11. TEST SAMPLING
Samples for production testing shall realistically reflect the properties in the actual components.

12. WELDING
The PQR/WPAR shall be qualified in accordance with ASME IX or EN 288-3 and shall include the same examinations as for the production testing. The qualification shall be carried out on the same material grade (UNS number) as used in production. Change of specific make (brand name) of welding consumables requires requalification.

13. TOLERANCES
The pipes shall have a max. undertolerance of 0.3 mm for pipe with nominal OD $\geq 8"$.

</tr>
</tbody>
</table>

#### 14. NON DESTRUCTIVE TESTING

Eddy current testing according to ASTM A 450 is acceptable as replacement for spot radiography for wall thickness less than 4.0 mm. 

Supplementary requirement S3, penetrant testing, according to ASME V Article 6 shall apply to the weld area of 10% of the pipes (same test lot as defined for mechanical testing) delivered. The testing shall be carried out after calibration and pickling. Acceptance criteria shall be to ASME VIII, Div. 1 Appendix 8.

NDT operator qualification shall be approved by a 3rd party organization recognized by an EC member state.

#### 15. SURFACE FINISH

White pickled.

#### 16. REPAIR OF DEFECTS

Weld repair of base material is not acceptable. For repair of welds the same requirements to PQR/WPAR shall apply as for production welding.

#### 17. MARKING

The component shall be marked to ensure full traceability to melt and heat treatment lot.

#### 18. CERTIFICATION

Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.

<td>S7</td>
</tr>
</tbody>
</table>

1. **Scope**

This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

2. **Qualification**

Manufacturers of product to this MDS shall comply with the requirement of NORSOK Standard M-650.

3. **Steel Making**

The steel melt shall be refined with AOD or equivalent.

4. **Heat Treatment**

The fittings shall be solution annealed followed by water quenching.

5. **Chemical Composition**

N = 0.14 - 0.20 %

6. **Hardness**

The hardness shall be maximum 28 HRC or alternatively 271 HB or 290 HV10 for base material, HAZ and weld metal.

7. **Impact Testing**

Charpy V-notch testing according to ASTM A 370 at - 46 °C is required for the thickness ≥ 6 mm. The minimum absorbed energy shall be 45 J average and 35 J single. Reduction factors for sub-size specimens shall be: 7.5 mm - 5/6 and 5 mm - 2/3. The notch location and number of specimen shall be:

- Seamless fittings: One set, 3 specimens.
- Welded fittings: Two sets, each 3 specimen, located in weld metal and fusion line.

8. **Micrographic Examination**

The micrographic examination shall cover the near surfaces and mid-thickness region of the fittings including the weld zone. The ferrite content shall be determined according to ASTM E 562 or equivalent and shall be within 35 - 55 % for base material and 35-65 % for weld metal. The microstructure, as examined at 400 X magnification on a suitably etched specimen, shall be free from intermetallic phases and precipitates.

9. **Extent of Testing**

Tensile test, impact test hardness test and microstructure examination shall be carried out for each heat, heat treatment load within a wall thickness range of 5 mm and welded with the same WPS.

10. **Test Sampling**

Samples for production testing shall realistically reflect the properties in the actual components. Test sampling shall be made from an actual fitting or from a prolongation thereof.

11. **Welding**

The PQR/WPAR shall be qualified in accordance with ASME IX or EN 288-3 and shall include the same examinations as for the production testing. The qualification shall be carried out on the same material grade (UNS number) as used in production. Change of specific make of welding consumables requires requalification.

Welding shall be carried out by qualified welders according to qualified procedures approved by a 3rd party organization recognized by an EC member State.

12. **Non Destructive Testing**

Supplementary requirement S7, liquid penetrant testing, shall apply to 10 % of seamless (from the test lot as defined above) and 100 % of welded fittings above NPS 2. The testing shall be carried out after calibration and pickling. For welded fittings the testing shall cover the weld only. The acceptance criteria shall be ASME VIII, Div. 1, Appendix 8.

NDT operator qualification shall be approved by a 3rd party organization recognized by a EC member state.

</tbody>
</table>

1. **SCOPE**

This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard. This MDS is intended for forgings with maximum section thickness of 300 mm. For larger thickness special agreements shall be made in each case.

2. **QUALIFICATION**

Manufacturers of product to this MDS shall comply with the requirement of NORSOK Standard M-650.

3. **STEEL MAKING**

The steel melt shall be refined with AOD or equivalent.

4. **MANUFACTURING PROCESS**

The Hot Isostatic Pressed (HIP) process is an acceptable alternative to forging.

5. **HEAT TREATMENT**

The forgings shall be solution annealed followed by water quenching.

6. **CHEMICAL COMPOSITION**

N = 0.14 - 0.20 %

7. **HARDNESS**

The hardness shall be maximum 28 HRC (or alternatively 271 HB or 290 HV10).

8. **IMPACT TESTING**

Charpy V-notch testing according to ASTM A 370 at - 46 °C is required for the thickness ≥ 6 mm (thickness at the weld neck). The minimum absorbed energy shall satisfy 45 J average and 35 J single. Reduction factors for subsize specimens shall be: 7.5 mm - 5/6 and 5 mm - 2/3.

9. **MICROGRAPHIC EXAMINATION**

The micrographic examination shall be carried out at the same area as location of specimens for mechanical. The area shall be minimum 10 x 10 mm. The ferrite content shall be determined according to ASTM E 562 or equivalent and shall be within 35 - 55 %. The microstructure, as examined at 400 X magnification on a suitably etched specimen, shall be free from intermetallic phases and precipitates.

10. **EXTENT OF TESTING**

One set of impact test, tensile test, hardness test and microstructure examination shall be carried out for each heat and heat treatment load. The testing shall be carried out on the component with heaviest wall thickness within the load. A test lot shall not exceed 2000 kg for forgings with as forged weight ≤ 50 kg, and 5000 kg for forgings with as forged weight > 50 kg.

</tbody>
</table>

**11. TEST SAMPLING**

Samples for production testing shall realistically reflect the properties in the actual components.

Test samples shall be from prolongations on actual component. Sacrificial forgings shall be used for die-forged components. However, special agreements may be made for die-forged components with as forged weight exceeding 50 kg. Integrated test blocks shall be used for HIP.

Test location and orientation shall be:

- For forgings having maximum section thickness, \( T \leq 50 \text{ mm} \), the test specimens shall be taken at mid thickness and its mid length shall be at least 50 mm from any second surface.
- For forgings having maximum section thickness, \( T > 50 \text{ mm} \), the test specimen shall be taken at least \( \frac{1}{4} T \) from the nearest surface and at least \( T \) or 100 mm, whichever is less, from any second surface.

Sketches shall be established showing type, size and location of test samples and extraction of test specimens.

**12. NON DESTRUCTIVE TESTING**

Supplementary requirement ASTM A 961 S56, penetrant testing, shall apply to 10 % of forgings (from the lot as defined for mechanical testing) above NPS 2. The testing shall be carried out after final machining. Non-machined surfaces shall be pickled prior to the testing. The acceptance criteria shall be ASME VIII, Div. 1, Appendix 8.

NDT operator qualification shall be approved by a 3rd party organization recognized by an EC member state.

**13. SURFACE FINISH**

Finished products shall be white pickled. Machined surfaces do not require pickling.

**14. REPAIR OF DEFECTS**

Weld repair is not acceptable.

**15. MARKING**

The component shall be marked to ensure full traceability to melt and heat treatment lot.

**16. CERTIFICATION**

Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.

## MDS D46

### Rev. 3

**TYPE OF MATERIAL:** Ferritic / Austenitic Stainless Steel, Type 22Cr duplex

<table>
<thead>
<tr>
<th>PRODUCT</th>
<th>STANDARD</th>
<th>GRADE</th>
<th>ACCEPT. CLASS</th>
<th>SUPPL. REQ.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Castings</td>
<td>ASTM A 995</td>
<td>4A (UNS J92205)</td>
<td>-</td>
<td>S5, S6, S20</td>
</tr>
</tbody>
</table>

### 1. SCOPE

This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

### 2. QUALIFICATION

Manufacturers of product to this MDS shall comply with the requirement of NORSOK standard M-650.

### 3. STEEL MAKING

The steel melt shall be with AOD or equivalent refining.

### 4. HEAT TREATMENT

The castings shall be solution annealed followed by water quenching.

### 5. CHEMICAL COMPOSITION

N = 0.14 - 0.20 %

### 6. HARDNESS

The hardness shall be maximum 28 HRC or alternatively 271 HB or 290 HV10.

### 7. IMPACT TESTING

Charpy V-notch testing is required according to ASTM A 370 at - 46 °C. The minimum absorbed energy shall satisfy 45 J average and 35 J single.

### 8. MICROGRAPHIC EXAMINATION

The micrographic examination shall be carried out at the same area as location of specimens for mechanical testing. The area shall be minimum 10 x 10 mm. The ferrite content shall be determined according to ASTM E 562 or equivalent and shall be within 35 - 55 %. The microstructure, as examined at 200 X magnification on a suitably etched specimen, shall be free from intermetallic phases and precipitates.

### 9. EXTENT OF TESTING

A full set of tensile, impact, hardness tests and microstructure examinations shall be made for each heat and heat treatment load. A test lot shall not exceed 5 000 kg.

### 10. TEST SAMPLING

Samples for mechanical testing shall realistically reflect the properties in the actual components. Thickness of the test block shall be equal to the thickness of the actual components up to a maximum thickness of 100 mm. For flanged components the largest flange thickness shall apply.

Test specimens shall be cut from the 1/4 T location from the surface where T is the thickness of the test block.

Test block shall be integrally cast or gated onto the castings and shall not be removed from the castings until after the final quality heat treatment.

### 11. NON DESTRUCTIVE TESTING

**Liquid penetrant testing:** Supplementary requirement S6 shall apply to all surfaces (including internal surfaces) of all castings. The examination shall be carried out after final machining. Non-machined surfaces shall be pickled prior to the testing. The acceptance criteria shall be to ASME VIII, Div. 1, Appendix 7.

**Radiographic testing:** Supplementary requirement S5 shall apply to:

- Critical areas as per ANSI B16.34 of the pilot cast of each pattern.
- All butt weld ends of each casting
- Class 1500 psi and above; all critical areas to ANSI B16.34 of each casting.

The acceptance criteria shall be to ASME VIII, Div. 1 Appendix 7.

NDT operator qualification shall be approved by a 3rd organization recognized by an EC member state.
### MATERIAL DATA SHEET  
**TYPE OF MATERIAL:** Ferritic / Austenitic Stainless Steel, Type 22Cr duplex

<td>-</td>
<td>S5, S6, S8, S20</td>
</tr>
</tbody>
</table>

#### 12. SURFACE FINISH
White pickled. Machined surfaces do not require pickling.

#### 13. REPAIR OF DEFECTS
Supplementary requirement ASTM A 703 S20 shall apply.

- The repair welding procedure qualification shall include the following:
  - Qualified on a cast plate of the same grade (UNS-number) which shall be welded
  - Change of specific make of filler metal (brand name) requires re-qualification
  - Examination of microstructure of base material and weld zone. The ferrite content shall be 35-55% for the base material and 35-65% for the weld metal.
  - Charpy V-notch testing as specified above, with two sets each 3 specimens, with notch located in weld metal and fusion line, respectively.

Welding shall be carried out by qualified welders according to qualified procedures approved by a 3rd party organization recognized by an EC member State.

#### 14. MARKING
The component shall be marked to ensure full traceability to melt and heat treatment lot.

#### 15. CERTIFICATION
Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.
1. SCOPE
This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard. This MDS is intended for bars with maximum section thickness of 300 mm. For larger thickness special agreements shall be made in each case.

2. QUALIFICATION
Manufacturers of product to this MDS shall comply with the requirement of NORSOK Standard M-650.

3. STEEL MAKING
The steel melt shall be refined with AOD or equivalent.

4. HEAT TREATMENT
The bars shall be solution annealed followed by water quenching. The solution annealing temperature shall be as defined in ASTM A 182 for the actual grade/UNS number.

5. CHEMICAL COMPOSITION
\[ N = 0.14 - 0.20 \% \]

6. HARDNESS
The hardness shall be maximum 28 HRC or alternatively 271 HB or 290 HV10.

7. IMPACT TESTING
Charpy V-notch testing is required according to ASTM A 370 at \(-46^\circ\text{C}\). The minimum absorbed energy shall satisfy \(45\ J\) average and \(35\ J\) single.

8. MICROGRAPHIC EXAMINATION
The micrographic examination shall be carried out at the same area as location of specimens for mechanical testing. The area shall be minimum \(10 \times 10\ mm\). The ferrite content shall be determined according to ASTM E 562 or equivalent and shall be within 35 - 55 \%. The microstructure, as examined at 400 X magnification on a suitably etched specimen, shall be free from intermetallic phases and precipitates.

9. EXTENT OF TESTING
One set of impact test, tensile test, hardness test and microstructure examination shall be carried out for each heat and heat treatment load.

10. TEST SAMPLING
Samples for production testing shall realistically reflect the properties in the actual components.

- For bars having maximum section thickness, \(T \leq 50\ mm\), the test specimens shall be taken at mid thickness and its mid length shall be at least 50 mm from any second surface.
- For bars having maximum section thickness, \(T > 50\ mm\), the test specimen shall be taken at least \(1/4\ T\) from the nearest surface and at least \(T\) or 100 mm, whichever is less, from any second surface.
- The testing shall be carried out in longitudinal direction. For thickness exceeding 160 mm, the testing shall be carried out both in longitudinal and transverse (tangential) direction. All testing in longitudinal direction shall meet specified requirements (ASTM A 276 and this MDS). For testing in transverse (tangential) direction elongation shall be minimum 20 \% and the minimum Charpy V-notch absorbed energy shall satisfy 27 J average and 20 J single.

13. **CERTIFICATION**
    EN 10 204 Type 3.1B. Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.
1. SCOPE
This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard. This MDS is based on the mechanical properties of UNS S 32750.

2. QUALIFICATION
Manufacturers of product to this MDS shall comply with the requirement of NORSOK Standard M-650.

3. STEEL MAKING
The steel melt shall be refined with AOD or equivalent.

4. HEAT TREATMENT
The pipes shall be solution annealed followed by water quenching.

5. CHEMICAL COMPOSITION
PRE = % Cr + 3.3 % Mo + 16 % N \( \geq 40.0 \)

6. TENSILE TESTING
\( R_{p0.2} \geq 550 \) MPa; \( R_m \geq 800 \) MPa; \( A_5 \geq 25\% \)

7. HARDNESS
The harness shall be max. 32 HRC (or alternatively 301 HB or 330 HV 10).

8. IMPACT TESTING
Charpy V-notch testing according to ASTM A 370 at -46 °C is required for thickness \( \geq 6 \) mm. The minimum absorbed energy shall be 45 J average / 35 J single. Reduction factors for sub-size specimens shall be: 7.5 mm - 5/6 and 5 mm - 2/3.

9. CORROSION TEST
Corrosion test according to ASTM G 48 Method A is required. Test temperature shall be 50 °C and the exposure time 24 hours. The specimen shall have the internal and external surfaces in the as-delivered condition (including pickling). Cut edges shall be prepared according to ASTM G 48, and the whole specimen shall be pickled (20 % HNO\(_3\) + 5 % HF, 60 °C, 5 minute). The test shall expose the external and internal surfaces and a cross section surface in full wall thickness. The acceptance criteria are:
- No pitting 20 X magnification.
- The weight loss shall be less than 4.0 g/m\(^2\).

10. MICROGRAPHIC EXAMINATION
The micrographic examination shall cover the near surfaces and mid-thickness region of the pipe. The ferrite content shall be determined according to ASTM E 562 or equivalent and shall be within 35-55 %. The microstructure, as examined at 400 X magnification on a suitably etched specimen, shall be free from intermetallic phases and precipitates.

11. EXTENT OF TESTING
Charpy V-notch impact, microstructure, hardness, corrosion and tensile testing shall be carried out for each lot as defined in the referred standard. For batch furnace testing the specified tests shall be carried out for each heat treatment charge.

12. TEST SAMPLING
Samples for production testing shall realistically reflect the properties in the actual components.

13. SURFACE FINISH
White pickled.

14. REPAIR OF DEFECTS
Weld repair is not acceptable.

15. MARKING

The component shall be marked to ensure full traceability to melt and heat treatment lot.

16. CERTIFICATION

Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.
### 1. SCOPE
This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard. This MDS is based on the mechanical properties of UNS S 32750.

### 2. QUALIFICATION
Manufacturers of product to this MDS shall comply with the requirement of NORSOK Standard M-650.

### 3. STEEL MAKING
The steel melt shall be refined with AOD or equivalent.

### 4. HEAT TREATMENT
The pipes shall be solution annealed followed by water quenching.

### 5. CHEMICAL COMPOSITION
PRE = % Cr + 3.3 % Mo + 16 % N ≥ 40.0

### 6. TENSILE TESTING
$R_{p0.2} \geq 550$ MPa; $R_m \geq 795$ MPa; $A \geq 25\%$

### 7. HARDNESS
The hardness shall be maximum 32 HRC (or alternatively 301 HB or 330 HV10) for base material, HAZ and weld metal.

### 8. IMPACT TESTING
Charpy V-notch testing according to ASTM A 370 at -46°C is required for thickness ≥ 6 mm. The minimum absorbed energy shall be 45 J average / 35 J single. Two sets, each 3 specimens, shall be carried out with notch located in weld meal and fusion line, respectively. Reduction factors for sub-size specimens shall be: 7.5 mm - 5/6 and 5 mm - 2/3.

### 9. CORROSION TEST
Corrosion test according to ASTM G 48 Method A is required. Test temperature shall be 50 °C and the exposure time 24 hours. The specimen shall have the internal and external surfaces in the as-delivered condition (including pickling). Cut edges shall be prepared according to ASTM G48, and the whole specimen shall be pickled (20 % HNO3 + 5 % HF, 60 °C, 5 minute). The test shall expose the external and internal surfaces and a cross section surface including weld zone in full wall thickness. The acceptance criteria are:
- No pitting at 20 X magnification
- The weight loss shall be less than 4.0 g/m²

### 10. MICROGRAPHIC EXAMINATION
The micrographic examination shall cover the near surfaces and mid-thickness region of the pipe including the weld and heat affected zone. The ferrite content shall be determined according to ASTM E 562 or equivalent and shall be within 35-55 % for base material and 35-65% for weld metal. The microstructure, as examined at 400 X magnification on a suitably etched specimen, shall be free from intermetallic phases and precipitates.

### 11. EXTENT OF TESTING
Tensile, impact, hardness, corrosion and microstructure examination shall be carried out for each lot. The lot is defined as follows:
- For batch furnace a lot is defined as maximum 60 m of pipe of the same heat, size and heat treatment charge.
- For continuous heat treatment furnace the lot definition in para 8.1 of the ASTM standard apply.
**MATERIAL DATA SHEET**

**TYPE OF MATERIAL:** Ferritic/Austenitic Stainless Steel, Type 25Cr duplex

**12. TEST SAMPLING**  
Samples for production testing shall realistically reflect the properties in the actual components.

**13. WELDING**  
The PQR/WPAR shall be qualified in accordance with ASME IX or EN 288-3 and shall include the same examinations as for the production testing. The qualification shall be carried out on the same material grade (UNS number) as used in production. Change of specific make (brand name) of welding consumables requires requalification.

Welding shall be carried out by qualified welders according to qualified procedures approved by a 3rd party organization recognized by an EC member State.

**14. TOLERANCES**  
The pipes shall have a max. undertolerance of 0.3 mm for nominal OD ≥ 8”.

**15. NON DESTRUCTIVE TESTING**  
Eddy current testing according to ASTM A 450 is acceptable as replacement for spot radiography for wall thickness less than 4.0 mm.

Supplementary requirement S3, penetrant testing, according to ASME V Article 6 shall apply to the weld of 10% of the pipes (same test lot as defined for mechanical testing) delivered. The weld of each examined pipe shall be ground flush in a length of 100 mm prior to penetrant testing. The testing shall be carried out after calibration and pickling. Acceptance criteria shall be to ASME VIII, Div 1, Appendix 8.

NDT operator qualification shall be approved by a 3rd party organization recognized by an EC member state.

**16. SURFACE FINISH**  
White pickled.

**17. REPAIR OF DEFECTS**  
Weld repair of base material is not acceptable. For repair of welds the same requirements to PQR/WPAR shall apply as for production welding.

**18. MARKING**  
The component shall be marked to ensure full traceability to melt and heat treatment lot.

**19. CERTIFICATION**  
Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.

| **1. SCOPE** | This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard. |
| **2. QUALIFICATION** | Manufacturers of product to this MDS shall comply with the requirement of NORSOK Standard M-650. |
| **3. STEEL MAKING** | The steel melt shall be refined with AOD or equivalent. |
| **4. HEAT TREATMENT** | Solution annealing followed by water quenching. |
| **5. CHEMICAL COMPOSITION** | PRE = % Cr + 3.3 % Mo + 16 % N ≥ 40.0 |
| **6. TENSILE TESTING** | Base material properties: Rp0.2 ≥ 550 MPa; Rm ≥ 800 MPa; A5 ≥ 25 % |
| **7. HARDNESS** | The hardness shall be maximum 32 HRC (or alternatively 301 HB or 330 HV10) for base material, HAZ and weld metal. |
| **8. IMPACT TESTING** | Charpy V-notch testing according to ASTM A 370 at -46 °C is required for the thickness ≥ 6 mm. The minimum absorbed energy shall be 45 J average / 35 J single. Reduction factors for sub-size specimens shall be: 7.5 mm -5/6 and 5 mm -2/3. The notch location and number of specimen shall be:  
- Seamless fittings: One set, (3 specimens).  
- Welded fittings: Two sets, (each 3 specimen) located in weld metal and fusion line. |
| **9. CORROSION TEST** | Corrosion test according to ASTM G 48 Method A is required. Test temperature shall be 50 °C and the exposure time 24 hours. The specimen shall have the internal and external surfaces in the as-delivered condition (including pickling). Cut edges shall be prepared according to ASTM G 48, and the whole specimen shall be pickled (20 % HNO3 + 5 % HF, 60 °C, 5 minute). The test shall expose the external and internal surfaces and a cross section including weld zone (if relevant) in full wall thickness. The acceptance criteria are:  
- No pitting at 20 X magnification.  
- The weight loss shall be less than 4.0 g/m². |
| **10. MICROGRAPHIC EXAMINATION** | The micrographic examination shall cover the near surfaces and mid-thickness region. For welded fittings both the weld and the base material is required examined. The ferrite content shall be determined according to ASTM E 562 or equivalent and shall be within 35-55 % for base material and 35-65 % for weld metal. The microstructure, as examined at 400 X magnification on a suitably etched specimen, shall be free from intermetallic phases and precipitates. |
| **11. EXTENT OF TESTING** | Tensile testing, impact testing, hardness testing, corrosion testing and microstructure examination shall be carried out for each heat and heat treatment load within a wall thickness range of 5 mm and welded with the same WPS. |

### 12. TEST SAMPLING

Samples for production testing shall realistically reflect the properties in the actual components. Test sampling shall be made from an actual fitting or from a prolongation thereof.

### 13. WELDING

The PQR/WPAR shall be qualified in accordance with ASME IX or EN 288-3 and shall include the same examinations as for the production testing. The qualification shall be carried out on the same material grade (UNS number) as used in production. Change of specific make (brand name) of welding consumables requires requalification. Welding shall be carried out by qualified welders according to qualified procedures approved by a 3rd party organization recognized by an EC member State.

### 14. NON DESTRUCTIVE TESTING

Supplementary requirements S7, Penetrant Testing, shall apply to 10% of seamless (from the test lot as defined above) and 100% of welded fittings above NPS 2. The examination shall be carried out after calibration and pickling. For welded fittings the examination shall cover the weld only. The weld of each examined fitting shall be ground flush in a length of 100 mm prior to penetrant testing. The acceptance criteria shall be ASME VIII, Div. 1, Appendix 8.

NDT operator qualification shall be approved by a 3rd party organization recognized by an EC member state.

### 15. SURFACE FINISH

White pickled.

### 16. REPAIR OF DEFECTS

Weld repair of base material is not acceptable. For repair of welds the same requirements to PQR/WPAR shall apply as for production welding.

### 17. MARKING

The component shall be marked to ensure full traceability to melt and heat treatment lot.

### 18. CERTIFICATION

Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.

</tbody>
</table>

1. SCOPE
This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

This MDS is intended for forgings with maximum section thickness of 200 mm. For larger thickness special agreements shall be made in each case.

2. QUALIFICATION
Manufacturers of product to this MDS shall comply with the requirement of NORSOK Standard M-650.

3. STEEL MAKING
The steel melt shall be refined with AOD or equivalent.

4. MANUFACTURING PROCESS
The component shall be quenched in water after forging.

The Hot Isostatic Pressed (HIP) process is an acceptable alternative to forging.

5. HEAT TREATMENT
Solution annealing followed by water quenching.

6. CHEMICAL COMPOSITION
PRE = % Cr + 3.3 % Mo + 16 % N ≥ 40.0.

7. TENSILE TESTING
Rp0.2 ≥ 550 MPa; Rm ≥ 800 MPa; A ≥ 25 %. For thickness > 50 mm, the tensile properties shall be Rp0.2 ≥ 515 MPa; Rm ≥ 730 MPa; A ≥ 25 % or as agreed with Purchaser.

8. HARDNESS
The hardness shall be maximum 32 HRC (or alternatively 301 HB or 330 HV10).

9. IMPACT TESTING
Charpy V-notch testing according to ASTM A 370 at -46 °C is required for the thickness ≥ 6 mm (thickness at the weld neck). The minimum absorbed energy shall satisfy 45 J average / 35 J single. Reduction factors for subsize specimens shall be: 7.5 mm - 5/6 and 5 mm - 2/3.

10. MICROGRAPHIC EXAMINATION
The micrographic examination shall be carried out at the same area as location of specimens for mechanical testing. The area shall be minimum 10 x 10 mm. The ferrite content shall be determined according to ASTM E 562 or equivalent and shall be within 35 -55 %. The microstructure, as examined at 400 X magnification on a suitably etched specimen, shall be free from intermetallic phases and precipitates.

11. CORROSION TEST
Corrosion test according to ASTM G 48, Method A is required. Test temperature shall be 50 °C and the exposure time 24 hours. The corrosion test specimen shall be at the same location as those for mechanical testing. Cut edges shall be prepared according to ASTM G 48 and pickled (20 % HNO3 + 5 % HF, 60 °C, 5 Minute). The acceptance criteria are:
- No pitting at 20 X magnification.
- The weight loss shall be less than 4.0 g/m².
## Extent of Testing

One set of impact, tensile, hardness, corrosion testing and microstructure examination shall be carried out for each heat and heat treatment load. The testing shall be carried out on the component with heaviest wall thickness within the load. A test lot shall not exceed 2000 kg for forgings with as forged weight \( \leq 50 \) kg, and 5000 kg for forgings with as forged weight > 50 kg.

## Test Sampling

Samples for production testing shall realistically reflect the properties in the actual components.

Test samples shall be from prolongations on actual component. Sacrificial forgings shall be used for die-forged components. However, special agreements may be made for die-forged components with as forged weight exceeding 50 kg. Integrated test blocks shall be used for HIP.

Test location and orientation shall be:

- For forgings having maximum section thickness, \( T \leq 50 \) mm, the test specimens shall be taken at mid thickness and its mid length shall be at least 50 mm from any second surface.
- For forgings having maximum section thickness, \( T > 50 \) mm, the test specimen shall be taken at least \( \frac{1}{4} T \) from the nearest surface and at least \( T \) or 100 mm, whichever is less, from any second surface.

Sketches shall be established showing type, size and location of test samples and extraction of test specimens.

## Non Destructive Testing

Supplementary requirement of ASTM A 961 S56, liquid penetrant testing, shall apply to 10% of forgings (from the lot as defined for mechanical testing) above NPS 2. The testing shall be carried out after final machining and pickling. The acceptance criteria shall be ASME VIII, Div. 1, Appendix 8.

NDT operator qualification shall be approved by a 3rd party organization recognized by an EC member state.

## Surface Finish

Finished products shall be white pickled, including machined surfaces.

## Repair of Defects

Weld repair is not acceptable.

## Marking

The component shall be marked to ensure full traceability to melt and heat treatment lot.

## Certification

Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.

1. **SCOPE**
   - This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard. This MDS is based on the mechanical properties of UNS S 32750.

2. **QUALIFICATION**
   - Manufacturers of product to this MDS shall comply with the requirement of NORSOK Standard M-650.

3. **STEEL MAKING**
   - The steel melt shall be refined with AOD or equivalent.

4. **HEAT TREATMENT**
   - Solution annealing followed by water quenching.

5. **CHEMICAL COMPOSITION**
   - PRE = %Cr + 3.3 % Mo + 16 % N ≥ 40.0.

6. **TENSILE TESTING**
   - $R_{p0.2}$ ≥ 550 MPa; $R_m$ ≥ 750 MPa; $A$ ≥ 25%.

7. **HARDNESS**
   - The hardness shall be maximum 32 HRC or alternatively 301 HB or 330 HV10.

8. **IMPACT TESTING**
   - Charpy V-notch testing according to ASTM A 370 at -46 °C is required for thickness ≥ 6mm. The minimum absorbed energy shall satisfy 45 J average / 35 J single. Reduction factors for sub-size specimens shall be: 7.5 mm - 5/6 and 5 mm - 2/3.

9. **MICROGRAPHIC EXAMINATION**
   - The micrographic examination shall cover the near surface and mid-thickness region. The ferrite content shall be determined according to ASTM E 562 or equivalent and shall be within 35 - 55 %. The microstructure, as examined at 400 X magnification on a suitably etched specimen, shall be free from intermetallic phases and precipitates.

10. **CORROSION TEST**
    - Corrosion test according to ASTM G 48 Method A is required. Test temperature shall be 50 °C and the exposure time 24 hours. The specimen shall have surfaces in the as-delivered condition (including pickling). Cut edges shall be prepared according to ASTM G 48, and the whole specimen shall be pickled (20 % HNO3 + 5 % HF, 60 °C, 5 minute). The test shall expose both surfaces and a cross section in full wall thickness. The acceptance criteria are:
      - No pitting at 20 X magnification.
      - The weight loss shall be less than 4.0 g/m².

11. **EXTENT OF TESTING**
    - Test samples for impact testing, microstructure, hardness, corrosion and tensile testing shall be carried out for each heat and heat treatment lot.

12. **TEST SAMPLING**
    - Samples for production testing shall realistically reflect the properties in the actual components.

13. **SURFACE FINISH**
    - White pickled.

14. **REPAIR OF DEFECTS**
    - Repair welding is not acceptable.

15. **MARKING**
    - The component shall be marked to ensure full traceability to melt and heat treatment lot.

16. **CERTIFICATION**
    - Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

7. **HARDNESS**
   - The hardness shall be less than 32 HRC (or alternatively 301 HB or 330 HV10).

8. **IMPACT TESTING**
   - Charpy V-notch testing is required according to ASTM A 370 at - 46 °C. The minimum absorbed energy shall satisfy 45 J average / 35 J single.

9. **MICROGRAPHIC EXAMINATION**
   - The micrographic examination shall be carried out at the same area as location of specimens for mechanical tests. The area shall be minimum 10 x 10 mm. On WPQ’s both the weld, HAZ and base material shall be examined. The ferrite content shall be determined according to ASTM E 562 or equivalent and shall be within 35 - 55 %. The microstructure, as examined at 200 X magnification on a suitably etched specimen, shall be free from intermetallic phases and precipitates.

10. **CORROSION TEST**
    - Corrosion test according to ASTM G 48 Method A is required. Test temperature shall be 50 °C and the exposure time 24 hours. The corrosion test specimen shall be at the same location as those for mechanical testing. Cut edges shall be prepared according to ASTM G 48 and pickled (20 % HNO3 + 5 % HF, 60 °C, 5 minute). The acceptance criteria are:
      - No pitting at 20X magnification.
      - The weight loss shall be less than 4.0 g/m².

11. **EXTENT OF TESTING**
    - A full set of mechanical and corrosion tests and microstructure examinations shall be made for each heat and heat treatment charge. A test lot shall not exceed 5 000 kg.

12. **TEST SAMPLING**
    - Samples for production testing shall realistically reflect the properties in the actual components. Thickness of the test block shall be equal to the thickness of the actual components up to a maximum thickness of 100 mm. For flanged components the largest flange thickness shall apply
    - Test specimens shall be cut from the 1/4 T location from the surface where T is the thickness of the test block.
    - Test block shall be integrally cast or gated onto the castings and shall not be removed from the castings until after the final quality heat treatment.
### MATERIAL DATA SHEET  MDS D56  Rev. 3

13. **NON DESTRUCTIVE TESTING**  
*Liquid penetrant testing:* Supplementary requirement S6 shall apply to all surfaces (including internal surfaces) of all castings. The testing shall be carried out after final machining and pickling. The acceptance criteria shall be ASME VIII, Div. 1, Appendix 7.

*Radiographic testing:* Supplementary requirement S5 shall apply to:
- Critical areas as per ANSI B16.34 of the pilot cast of each pattern
- All butt weld ends of each casting
- Class 1500 psi and above; all critical areas to ANSI B16.34 of each casting.

The acceptance criteria shall be to ASME VIII, Div. 1 Appendix 7.

NDT operator qualification shall be approved by a 3rd party organization recognized by an EC member state.

14. **SURFACE FINISH**  
White pickled shall be carried out after any blasting and shall include finished machined surfaces.

15. **REPAIR OF DEFECTS**  
Supplementary requirement of ASTM A 703 S20 shall apply. The repair welding procedure shall be qualified in accordance with ASME IX or EN 288-3 and this MDS. The repair welding procedure qualification shall include the following:
- Qualified on a cast plate of the same grade (UNS number), which shall be welded.
- Change of specific make of filler metal (brand names) requires requalification.
- Examination of microstructure of base material and weld zone. The ferrite content shall be 35 - 55 % for the base material and 35-65 % for the weld metal.
- Charpy V-notch testing as specified above, with two sets (each 3 specimens), with notch located in weld metal and fusion line, respectively.
- Corrosion test as specified above. The specimen shall include weld zone.

Welding shall be carried out by qualified welders according to qualified procedures approved by a 3rd party organization recognized by an EC member State.

16. **MARKING**  
The component shall be marked to ensure full traceability to melt and heat treatment lot.

17. **CERTIFICATION**  
Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.
1. **SCOPE**

This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard. This MDS is intended for bars with maximum thickness of 200 mm. For larger thickness special agreements shall be made in each case.

2. **QUALIFICATION**

Manufacturers of product to this MDS shall comply with the requirement in NORSOK Standard M-650.

3. **STEEL MAKING**

The steel melt shall be refined with AOD or equivalent.

4. **HEAT TREATMENT**

Solution annealing followed by water quenching. The solution annealing temperature shall be as defined in ASTM A 182 for the actual grades/UNS number.

5. **CHEMICAL COMPOSITION**

PRE (% Cr + 3.3 % Mo + 16 % N) ≥ 40.0.

6. **TENSILE TESTING**

Rp0.2 ≥ 550 MPa; Rm ≥ 750 MPa; A ≥ 25 %.

7. **HARDNESS**

The hardness shall be maximum 32 HRC (or alternatively 301 HB or 330 HV10).

8. **IMPACT TESTING**

Charpy V-notch testing is required according to ASTM A 370 at -46 °C. The minimum absorbed energy shall satisfy 45 J average / 35 J single.

9. **MICROGRAPHIC EXAMINATION**

The micrographic examination shall be carried out at the same area as location of specimens for mechanical testing. The area shall be minimum 10 x 10 mm. The ferrite content shall be determined according to ASTM E 562 or equivalent and shall be within 35 - 55 %. The microstructure, as examined at 400 X magnification on a suitably etched specimen, shall be free from intermetallic phases and precipitates.

10. **CORROSION TEST**

Corrosion test according to ASTM G 48 Method A is required. Test temperature shall be 50 °C and the exposure time 24 hours. The corrosion test specimen shall be at the same location as those for mechanical testing. Cut edges shall be prepared according to ASTM G 48 and pickled (20 % HNO3 + 5 % HF, 60 °C, 5 minute). The acceptance criteria are:

- No pitting at 20 X magnification.
- The weight loss shall be less than 4.0 g/m².

11. **EXTENT OF TESTING**

One set of impact test, tensile test, hardness test, microstructure examination and corrosion test shall be carried out for each heat and heat treatment load.
### 12. TEST SAMPLING

Samples for production testing shall realistically reflect the properties in the actual components.

Test location and orientation shall be:

- For bars having maximum section thickness, $T \leq 50$ mm, the test specimens shall be taken at mid thickness and its mid length shall be at least 50 mm from any second surface.

- For bars having maximum section thickness, $T > 50$ mm, the test specimen shall be taken at least $\frac{1}{4} T$ from the nearest surface and at least $T$ or 100 mm, whichever is less, from any second surface.

- The testing shall be carried out in longitudinal direction. For thickness exceeding 160 mm, the testing shall be carried out both in longitudinal and transverse (tangential) direction. All testing in longitudinal direction shall meet specified requirements (ASTM A 276 and this MDS). For testing in transverse (tangential) direction elongation shall be minimum 20% and the minimum Charpy V-notch absorbed energy shall satisfy 27 J average and 20 J single.

### 15. SURFACE FINISH

White pickled.

### 16. REPAIR OF DEFECTS

Weld repair is not acceptable.

### 17. MARKING

The component shall be marked to ensure full traceability to melt and heat treatment lot.

### 18. CERTIFICATION

Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.
1. SCOPE
This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard. This MDS is based on the mechanical properties of UNS S 32750.

2. QUALIFICATION
Manufacturers of product to this MDS shall comply with the requirement of NORSOK Standard M-650.

3. STEEL MAKING
The steel melt shall be refined with AOD or equivalent.

4. HEAT TREATMENT
The tubes shall be solution annealed followed by water quenching.

5. CHEMICAL COMPOSITION
PRE = % Cr + 3.3 % Mo + 16 % N ≥ 40.0.

6. TENSILE TESTING
Rp0.2 ≥ 550 MPa; Rm ≥ 750 MPa; A ≥ 25 %.

7. HARDNESS
The hardness shall be max. 32 HRC (or alternatively 301 HB or 330 HV10).

8. IMPACT TESTING
Charpy V-notch testing (3 specimens) according to ASTM A 370 at -46 °C is required for the thickness ≥ 6 mm. The minimum absorbed energy shall be 45 J average / 35 J single. Reduction factors for sub-size specimens shall be: 7.5 mm - 5/6 and 5 mm - 2/3.

9. CORROSION TEST
Corrosion test according to ASTM G 48 Method A is required. Test temperature shall be 50 °C and the exposure time 24 hours. The specimen shall have the internal and external surfaces in the as-delivered condition (pickling or bright annealed). Cut edges shall be prepared according to ASTM G 48, and the whole specimen shall be pickled (20 % HNO3 + 5 % HF, 60 °C, 5 minute). The test shall expose the external and internal surfaces and a cross section surface in full wall thickness. The acceptance criteria are:
- No pitting at 20 X magnification.
- The weight loss shall be less than 4.0 g/m².

10. MICROGRAPHIC EXAMINATION
The ferrite content shall be determined according to ASTM E 562 or equivalent and shall be within 35 - 55 %. The microstructure, as examined at 400 X magnification on a suitably etched specimen, shall be free from intermetallic phases and precipitates.

11. EXTENT OF TESTING
Microstructure, hardness, tensile testing, impact testing and corrosion testing shall be carried out for each lot as defined in the referred standard.

12. TEST SAMPLING
Samples for production testing shall realistically reflect the properties in the actual components.

13. SURFACE FINISH
White pickled or bright annealed.

14. MARKING
The component shall be marked to ensure full traceability to melt and heat treatment lot.

15. CERTIFICATION
EN 10 204 Type 3.1B. Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.

</table>

1. **SCOPE**

This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

2. **DESIGN AND DIMENSIONAL STANDARDS**

The following EEMUA standards for: “90/10 Copper/Nickel Piping for Offshore Applications” shall be used:
- EEMUA Publication No. 144: “Tubes, Seamless and Welded”.
- EEMUA Publication No. 145: “Flanges, Composite and Solid”.
- EEMUA Publication No. 146: “Fittings”.

3. **MATERIALS**

Materials for fittings and flanges shall comply with the above listed standards and this MDS.

4. **MANUFACTURING PROCESS**

**Forming:**
Cold forming or hot forming may be used according to written procedures established in cooperation with the material manufacturers.

**Welding:**
An electric fusion welding process shall be used.

5. **HEAT TREATMENT/DELIVERY CONDITION**

**Hot formed components:**
Parts hot formed in the temperature range of 760 - 800 °C do not need annealing after forming.

**Cold formed components:**
Annealed.

**Welded components:**
Annealed, but acceptable as welded from annealed materials.

6. **CHEMICAL COMPOSITION**

For subsequent welding the chemical composition shall be modified as stated:

\[ \text{Zn} \leq 0.50\% , \ \text{Pb} \leq 0.02\% \text{ and } \text{C} \leq 0.05\% . \]

7. **EXTENT OF TESTING**

Tensile test specimens shall be taken from each lot. A lot is defined as all products of the same type and nominal size, which are produced from the same heat of material and subject to the same finishing operation.

8. **TEST SAMPLING**

Samples for production testing shall realistically reflect the properties in the actual components.

Test samples shall be cut from the products themselves. Sacrificial components or overlength on the components may be used. Sketches shall be established showing type, size and location of test samples and extraction of test specimens.

9. **WELDING**

Welding procedures shall be established and qualified in accordance with ASME IX.

10. NON DESTRUCTIVE TESTING

**Welded Pipes to B 467:**
- Sch. 10S: Welded pipes shall be spot radiographed to the extent of not less than 12 in. (300 mm) of radiograph per 50 ft (15 m) of weld.
- Otherwise: All welds shall be completely radiographed.

The radiographic testing shall be in accordance with the requirements of the ASME Boiler and Pressure Vessel Code, Section VIII, Div. 1, Paragraph UW-51 and UW-52 for 100 % and spot check tested respectively.

11. HYDROSTATIC TESTS

**Sml. pipes & tubes to B 466 and Welded pipes to B 467:**
- Each length of finished pipe shall be subjected to the hydrostatic test in accordance with ASTM A 530.

12. CERTIFICATION

EN 10 204 Type 3.1B.

</tbody>
</table>

1. **SCOPE**
This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

2. **CHEMICAL COMPOSITION**
Pb ≤ 0.02 %.

3. **HEAT TREATMENT**
Heat treatment shall be carried out at the discretion of the manufacturer, e.g. approx. 700 °C for 6 hours.

4. **EXTENT OF TESTING**
One tensile test shall be carried out for each lot, as defined by the in B148, and heat treatment load.

5. **TEST SAMPLING**
Samples for mechanical testing shall realistically reflect the properties in the actual components. Thickness of the test block shall be equal to the thickness of the actual components up to a maximum thickness of 100 mm. For flanged components the largest flange thickness shall apply.

Test specimens shall be cut from the 1/4 T location from the surface where T is the thickness of the test block.

Test block shall be integrally cast or gated onto the castings and shall not be removed from the castings until after the final quality heat treatment.

6. **WELDING**
Welding procedures shall be established and qualified in accordance with ASME IX for all repair welding.

7. **NON DESTRUCTIVE TESTING**

   **Liquid penetration testing:**
   100 % on all accessible surfaces of all castings. The testing shall be carried out after final machining. The acceptance criteria shall be to ASME VIII, Div. 1, Appendix 7.

   **Radiographic testing:**
   - Critical areas as per ANSI B 16.34 of the pilot cast of each pattern.
   - All butt weld ends of each casting.
   - Class 1500 psi and above, all critical areas to ANSI B16.34 of each casting.
   The acceptance criteria shall be to ASME VIII, Div. 1, Appendix 7.

8. **WELD REPAIR**
The repair welding procedure shall be qualified in accordance with ASME IX and this MDS.

   - A cast plate of the same material grade shall be used.
   - A macro test shall be carried out.
   - Repairs by peening and impregnation are prohibited.
   - Change of filler metal brand names requires requalification.

9. **CERTIFICATION**
EN 10 204 Type 3.1B.

1. **SCOPE**
   This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

3. **HEAT TREATMENT**
   Annealed.

4. **TEST SAMPLING**
   Samples for production testing shall realistically reflect the properties in the actual component.

5. **NON DESTRUCTIVE TESTING**
   **Fittings to B 366:** Supplementary requirement S3, liquid penetrant testing, shall apply to the weld area at 10% of seamless (from the same lot as defined for mechanical testing) and 100% of welded fittings above NPS2. For welded fittings the testing shall cover the weld only.

   **Forgings to B 564:** Supplementary requirement S5.3, liquid penetrant testing, shall be performed at 10% of forgings above NPS 2 (of same lot as defined for mechanical testing).

   NDT operator qualification shall be approved by a 3rd party organization recognized by an EC member state.

6. **SURFACE FINISH**
   White pickled. Shall be carried out after any blasting and shall include finished machined surfaces.

7. **REPAIR OF DEFECTS**
   Weld repair of base material is not acceptable.

8. **MARKING**
   The component shall be marked to ensure full traceability to melt and heat treatment lot.

9. **CERTIFICATION**
   Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

   Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.

1. **SCOPE**
   This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

2. **QUALIFICATION**
   Manufacturers of product to this MDS shall comply with the requirement of NORSOK Standard M-650.

3. **STEEL MAKING**
   The steel melt shall be refined with AOD or equivalent process. Remelting of AOD or equivalent steel in an electric furnace is acceptable. Use of internal scrap is not acceptable.

4. **HARDNESS**
   The hardness shall be maximum 35 HRC (or alternatively 301HB or 330HV).

5. **CORROSION TESTING**
   Corrosion test according to ASTM G 48 Method A is required. Test temperature shall be 50 °C and the exposure time 24 hours. The corrosion test specimen shall be at the same location as those for mechanical testing. Cut edges shall be prepared according to ASTM G 48 and pickled (20 % HNO3 + 5 % HF, 60 °C, 5 minute). The acceptance criteria are:
   - No pitting at 20 X magnification.
   - The weight loss shall be less than 4.0 g/m².

6. **EXTENT OF TESTING**
   Tensile test and corrosion test shall be made for each melt and heat treatment load. A test lot shall not exceed 5 000 kg.

7. **TEST SAMPLING**
   Samples for mechanical testing shall realistically reflect the properties in the actual components. Thickness of the test block shall be equal to the thickness of the actual components up to a maximum thickness of 100 mm. For flanged components the largest flange thickness shall apply.
   Test specimens shall be cut from the 1/4 T location from the surface where T is the thickness of the test block.
   Test block shall be integrally cast or gated onto the castings and shall not be removed from the castings until after the final quality heat treatment.

8. **NON DESTRUCTIVE TESTING**
   **Liquid penetrant testing:** Supplementary requirement S3 shall apply to all accessible surfaces of all castings. The testing shall be carried out after final machining and pickling. The acceptance criteria shall be ASME VIII, Div.1, Appendix 7.
   **Radiographic testing:** Supplementary requirement S2 shall apply to:
   - Critical areas as per ANSI B 16.34 of the pilot cast of each pattern.
   - All butt weld ends of each casting.
   - Class 1500 psi and above; all critical areas to ANSI B 16.34 of each casting.
   The acceptance criteria shall be ASME VIII, Div. 1, Appendix 7.
   NDT operator qualification shall be approved by a 3rd party organization recognized by an EC member state.

9. **SURFACE FINISH**
   White pickled. Shall be carried out after any blasting and shall include finished machined surfaces.

### 10. REPAIR OF DEFECTS

Repair welding shall be carried out in accordance with ASTM A 488. Welding shall be carried out by qualified welders according to qualified procedures approved by a 3rd party organization recognized by an EC member State. The repair welding procedure shall be qualified in accordance with ASME IX or EN 288-3 and this MDS.
- A cast plate of the same material grade (UNS number), which shall be used.
- A macro and corrosion test as specified above shall be carried out.
- Change of specific make of filler metal (brand name) requires requalification.

All casting with major repairs shall be given a solution heat treatment after welding.

### 11. MARKING

The component shall be marked to ensure full traceability to melt and heat treatment lot.

### 12. CERTIFICATION

Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.
### 1. SCOPE
This MDS specifies the technical requirements for the HNBR O-ring material.

### 2. PURCHASE INFORMATION
The purchase order shall contain the following information: Product form, dimensions, tolerances and/or referenced drawing(s) and grade designation.

### 3. CHEMICAL COMPOSITION
36 – 40% acrylonitrile content (ACN)

### 4. QUALIFICATION TEST REQUIREMENTS
The material shall be rapid pressure reduction resistant (ED resistant) and satisfy the following minimum requirements. The qualification shall be repeated if there are changes in the production route, manufacturing procedures, specified composition or properties of the product which exceeds the limits defined from qualification testing (each manufacturer and seal type shall be qualified):

#### ED-test
Qualification test requirements: O-ring cross section diameter 5.33 mm, 20% compression, text fixture, 70 – 85% groove fill, test medium 3% CO₂ in Methane, test temperature 100 oC, 72 hours initial soak at full pressure, followed by 5 cycles of:
- 200 bar (24h)
- Depressurisation: 20-40 bar/min.
- 1 hour rest time
- Re-pressurisation
- Leakage test

No leakage shall occur in a leakage test at room temperature and service pressure following the 5 decompression cycles. Further, no cracks shall be longer than 80% of the sample thickness, based on dissection, after the leakage test.

#### Mechanical properties
- Hardness ASTM D 2240 90 ± 5 Shore A
- Tensile strength ASTM D 412/1414 min. 20 MPa
- Elongation at break ASTM D 412/1414 min. 100%
- Compression set ASTM D 395 max. 25% (after 24 hours at 150°C)

#### Physical properties
- Specific gravity ASTM D 792 1.2 – 1.3 g/cm³

### 5. DIMENSIONS
According to BS 4518.

### 6. PRODUCTION TEST REQUIREMENTS
The below properties shall be documented by testing for each production batch and satisfy the requirements listed above.
- Specific gravity (ASTM D 792)
- Hardness (ASTM D 2240)
- Tensile and elongation properties (ASTM D 412/1414)

### 7. MARKING & PACKAGING
Seals shall be supplied in sealed airtight bags. Markings on the bags shall clearly indicate batch number, and such markings shall ensure traceability through the producers QC system to raw materials, formulation and manufacturing details. In addition, the bags shall be marked with an expected shelf life assuming storage at room temperature and without direct exposure to sunlight.

### 8. CERTIFICATION
Inspection certificate to EN 10204 Type 3.1B shall contain ID No. and all test results.

## TYPE OF MATERIAL: Nitrile (NBR)

<table>
<thead>
<tr>
<th>PRODUCT</th>
<th>TEMPERATURE RANGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>O-ring</td>
<td>-46°C to +150°C. Only short time exposure below –20 and 100°C is acceptable.</td>
</tr>
</tbody>
</table>

## 1. SCOPE

This MDS specifies the technical requirements for the NBR O-ring material.

## 2. PURCHASE INFORMATION

The purchase order shall contain the following information: Product form, dimensions, tolerances and/or referenced drawing(s) and grade designation.

## 3. CHEMICAL COMPOSITION

36 – 40% acrylonitrile content (ACN)

## 4. QUALIFICATION TEST REQUIREMENTS

The material shall be tested for oil resistance and satisfy the following minimum requirements. The qualification shall be repeated if there are changes in the production route, manufacturing procedures, specified composition or properties of the product which exceeds the limits defined from qualification testing (each manufacturer and seal type shall be qualified):

### Oil resistance test

Qualification test requirements: O-ring cross section diameter 5.33 mm, 20% compression, text fixture, 70 – 85% groove fill, test medium 10% toluene/90% Iso-octane/ASTM oil no. 3, test temperature 70°C, 72 hours soak time. The test vessel shall be pressurised with nitrogen to 50 bars.

No leakage shall occur in a leakage test at room temperature and service pressure following the exposure time. Further, the volume change shall be within +25%/-5%.

### Mechanical properties

- Hardness: ASTM D 2240 70 ± 5 Shore A
- Tensile strength: ASTM D 412/1414 min. 15 MPa
- Elongation at break: ASTM D 412/1414 min. 350%
- Compression set: ASTM D 395 max. 25% (after 24 hours at 150°C)

### Physical properties

- Specific gravity: ASTM D 792 1.2 – 1.3 g/cm³

## 5. DIMENSIONS

According to BS 4518.

## 6. PRODUCTION TEST REQUIREMENTS

The below properties shall be documented by testing for each production batch and satisfy the requirements listed above.

- Specific gravity (ASTM D 792)
- Hardness (ASTM D 2240)
- Tensile and elongation properties (ASTM D 412/1414)

## 7. MARKING & PACKAGING

Seals shall be supplied in sealed airtight bags. Markings on the bags shall clearly indicate batch number, and such markings shall ensure traceability through the producers QC system to raw materials, formulation and manufacturing details. In addition, the bags shall be marked with an expected shelf life assuming storage at room temperature and without direct exposure to sunlight.

## 8. CERTIFICATION

Inspection certificate to EN 10204 Type 3.1B shall contain ID No. and all test results.
1. SCOPE
This MDS specifies the technical requirements for the PEEK material.

2. PURCHASE INFORMATION
The purchase order shall contain the following information: Product form, dimensions, tolerances and / or referenced drawing(s) and grade designation.

3. CHEMICAL COMPOSITION
Poly-ether-ether-ketone polymer with necessary stabilisers and processing aids.

4. QUALIFICATION TEST REQUIREMENTS
The material shall satisfy the following minimum requirements. The qualification shall be repeated if there are changes in the production route, manufacturing procedures, specified composition or properties of the product which exceeds the limits defined from qualification testing:

   **Mechanical properties**
   - Tensile strength
     Test standard: ASTM D 638
     Virgin: 95 MPa
     Glass filled: > 150 MPa
   - Tensile modulus
     Test standard: ASTM D 638
     Virgin: > 3000MPa
     Glass filled: > 3500MPa
   - Compressive strength
     Test standard: ASTM D 695
     Virgin: > 110 MPa
     Glass filled: > 150 MPa
   - HDT @ 1.81 MPa
     Test standard: ASTM D 648
     Virgin: 150 °C
     Glass filled: 300 °C
   - Impact strength (notched)
     Test standard: ASTM D 256
     Virgin: > 70 J/m
     Glass filled: > 70 J/m
   - Ultimate elongation
     Test standard: ASTM D 638
     Virgin: > 55 %
     Glass filled: > 3 %

   **Physical properties**
   - Specific gravity
     Test standard: ASTM D 792
     Virgin: 1.3 - 1.4 g/cm³
     Glass filled: 1.4 - 1.6 g/cm³
   - Melting point
     Test standard: ASTM D 3418
     Virgin: 340 °C
     Glass filled: 340 °C
   - Water absorption (24 hrs.)
     Test standard: ASTM D 570
     Virgin: 0.15 %
     Glass filled: 0.15 %

5. DIMENSIONS
According to BS 4518.

6. PRODUCTION TEST REQUIREMENTS
The below properties shall be documented by testing for each production batch and satisfy the requirements listed above:

   - Specific gravity
     Test standard: ASTM D 792
   - Tensile strength
     Test standard: ASTM D 638
   - Ultimate elongation
     Test standard: ASTM D 638

7. MARKING & PACKAGING
Components shall be supplied in suitable packaging as to protect the items from physical damage prior to installation. Markings on the packaging shall clearly indicate material batch number, and such markings shall ensure traceability through the producers QC system to raw materials, formulation and manufacturing details.

8. CERTIFICATION
Inspection certificate to EN 10204 Type 3.1B shall contain ID No. and all test results.
1. SCOPE
This MDS specifies the technical requirements for the PTFE material.

2. PURCHASE INFORMATION
The purchase order shall contain the following information: Product form, dimensions, tolerances and / or referenced drawing(s) and grade designation.

3. CHEMICAL COMPOSITION
Carbon and fluorine, polymeric di-fluoromethane with necessary fillers, stabilisers and process aids. Also with graphite, glass or carbon fibre fillers. The lip-seal must be energised internally by a metallic spring (UNS R30003) or similar.

4. QUALIFICATION TEST REQUIREMENTS
The material shall satisfy the following minimum requirements. The qualification shall be repeated if there are changes in the production route, manufacturing procedures, specified composition or properties of the product which exceeds the limits defined from qualification testing:

### 1. SCOPE

This MDS specifies the technical requirements for the PEEK/PTFE material.

### 2. PURCHASE INFORMATION

The purchase order shall contain the following information: Product form, dimensions, tolerances and/or referenced drawing(s) and grade designation.

### 3. CHEMICAL COMPOSITION

Poly-ether-ether-ketone polymer with necessary stabilisers and processing aids and 10 to 20% PTFE (Poly-tetra-fluoro-ethylene) added.

### 4. QUALIFICATION TEST REQUIREMENTS

The material shall satisfy the following minimum requirements. The qualification shall be repeated if there are changes in the production route, manufacturing procedures, specified composition or properties of the product which exceeds the limits defined from qualification testing:

<table>

### 7. MARKING & PACKAGING

Components shall be supplied in suitable packaging as to protect the items from physical damage prior to installation. Markings on the packaging shall clearly indicate material batch number, and such markings shall ensure traceability through the producers QC system to raw materials, formulation and manufacturing details.

### 8. CERTIFICATION

Inspection certificate to EN 10204 Type 3.1B shall contain ID No. and all test results.
**MATERIAL DATA SHEET**

**TYPE OF MATERIAL**: Austenitic stainless steel, Type 6Mo

**PRODUCT** | **STANDARD** | **GRADE** | **ACCEPT. CLASS** | **SUPPL. REQ.**
--- | --- | --- | --- | ---
Seamless pipes | ASTM A 312 | UNS S31254 | - | -
 |  | UNS N08367 | - |
 |  | UNS N08926 | - |

1. **SCOPE**

This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

2. **QUALIFICATION**

Manufacturers of product to this MDS shall comply with the requirement of NORSOK Standard M-650.

3. **STEEL MAKING**

The steel melt shall be refined by AOD or equivalent.

4. **HEAT TREATMENT**

The pipes shall be solution annealed followed by water quenching.

5. **TENSILE TESTING**

\[ R_{P,0.2} \geq 310 \text{ MPa, } R_m \geq 675 \text{ MPa for } t \leq 5.0 \text{ mm and } R_m \geq 655 \text{ MPa for } t > 5.0 \text{ mm, } A_5 \geq 35 \% \text{ (long.)} \]

6. **CORROSION TESTING**

Corrosion test according to ASTM G 48 Method A is required. Test temperature shall be 50 °C and the exposure time 24 hours. Test specimens shall have the internal and external surfaces in the as-delivered condition (including pickling). Cut edges shall be prepared according to ASTM G48, and the whole specimen shall be pickled (20 % HNO3 + 5 % HF, 60 °C, 5 minute). The test shall expose the external and internal surfaces and a cross section surface in full wall thickness. The acceptance criteria are:

- No pitting at 20 X magnification.
- The weight loss shall be less than 4.0 g/m.

7. **EXTENT OF TESTING**

Corrosion test shall be carried out to the same extent as stated for mechanical tests in the referred standard.

8. **TEST SAMPLING**

Samples for production testing shall realistically reflect the properties in the actual components.

9. **SURFACE FINISH**

White pickled.

10. **REPAIR OF DEFECTS**

Weld repair is not acceptable.

11. **MARKING**

The component shall be marked to ensure full traceability to melt and heat treatment lot.

12. **CERTIFICATION**

Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.
## MATERIAL DATA SHEET

### TYPE OF MATERIAL:
Austenitic Stainless Steel, Type 6Mo

<table>
<thead>
<tr>

<tbody>
<tr>
<td>Welded Pipes</td>
<td>ASTM A 358</td>
<td>UNS S31254</td>
<td>Class 1, 3 and 5.</td>
<td>S3</td>
</tr>
</tbody>
</table>

### 1. SCOPE
This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

### 2. QUALIFICATION
Manufacturers of product to this MDS shall comply with the requirement of NORSOK Standard M-650.

### 3. STEEL MAKING
Steel melt shall be refined with AOD or equivalent refining.

### 4. HEAT TREATMENT
The pipes shall be solution annealed followed by water quenching. Post weld solution annealing is not required if pipes with nominal wall thickness up to 7.11 mm manufactured out of solution annealed plate material as stated in chapter 5.3.2.2 of A 358.

### 5. TENSILE TESTING
\[ R_{p0.2} \geq 310 \text{ MPa}, \quad R_m \geq 690 \text{ MPa}, \quad A5 \geq 35 \% \]

### 6. CORROSION TESTING
Corrosion test according to ASTM G 48 Method A is required. Test temperature shall be 50 °C and the exposure time 24 hours. Test specimens shall have the internal and external surfaces in the as-delivered condition (including pickling). Cut edges shall be prepared according to ASTM G 48, and the whole specimen shall be pickled (20 % HNO3 + 5 % HF, 60 °C, 5 minute). The test shall expose the external and internal surfaces and a cross section surface including weld zone in full wall thickness. The acceptance criteria are:
- No pitting at 20 X magnification.
- The weight loss shall be less than 4.0 g/m².

### 7. EXTENT OF TESTING
Tensile and corrosion testing shall be carried out for each lot defined as follows:
- For batch furnace a lot is defined as maximum 60 m pipe of the same heat, size and heat treatment charge.
- For continuous heat treatment furnace a lot is defined as maximum 60 m of pipe of the same heat and size and which are heat treated the same day.

### 8. TEST SAMPLING
Samples for production testing shall realistically reflect the properties in the actual components.

### 9. WELDING
The PQR/WPAR shall be qualified in accordance with ASME IX or EN 288-3 and this MDS:
- The weld consumable shall be Ni-base and the alloying content shall be: Mo \geq 8.0 \%; Cr \geq 15.0 \%; (Mo + Cr) \geq 28 \%; C \leq 0.030 \%; and S \leq 0.015 \%
- The PQR/WPAR shall be corrosion tested as specified above.

The qualification shall be carried out on the same material grade (UNS number) as used in production. Change of specific make (brand name) of welding consumables requires requalification.

Welding shall be carried out by qualified welders according to qualified procedures approved by a 3rd party organization recognized by an EC member State.
### Type of Material: Austenitic Stainless Steel, Type 6Mo

</tbody>
</table>

#### 10. Non Destructive Testing
Eddy current testing according to ASTM A 450 is acceptable as replacement for radiography for wall thickness less than 4.0 mm.

Supplementary requirement S3, penetrant testing, shall apply according to ASME V Article 6, to the weld area of 10 % of the pipes (same test lot as defined for mechanical testing) delivered. The weld of each examined pipe shall be ground flush in a length of 100 mm prior to penetrant testing. The testing shall be carried out after calibration and pickling. Acceptance criteria shall be to ASME VIII Div. 1 Appendix 8.

NDT operator qualification shall be approved by a 3rd party organization recognized by an EC member state.

#### 11. Surface Finish
White pickled.

#### 12. Repair of Defects
Weld repair of base material is not acceptable. For repair of welds the same requirements to PQR/WPAR as for production welding shall apply.

#### 13. Marking
The component shall be marked to ensure full traceability to melt and heat treatment lot.

#### 14. Certification
Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.
1. SCOPE
This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

2. QUALIFICATION
Manufacturers of product to this MDS shall comply with the requirement of NORSOK Standard M-650.

3. STEEL MAKING
Steel melt shall be refined with AOD or equivalent.

4. HEAT TREATMENT
The fittings shall be solution annealed followed by water quenching.

5. TENSILE TESTING
$R_{p0.2} \geq 300$ MPa, $R_m \geq 650 - 820$ MPa, $A_5 \geq 35\%$.

6. CORROSION TESTING
Corrosion test according to ASTM G 48 Method A is required. Test temperature shall be 50 °C and the exposure time 24 hours. The specimen shall have the internal and external surfaces in the as-delivered condition (including pickling). Cut edges shall be prepared according to ASTM G 48, and the whole specimen shall be pickled (20 % HNO3 + 5 % HF, 60 °C, 5 minute). The test shall expose the external and internal surfaces and a cross section including weld zone (if relevant) in full wall thickness. The acceptance criteria are:
- No pitting at 20 X magnification.
- The weight loss shall be less than 4.0 g/m².

7. EXTENT OF TESTING
Tensile and corrosion testing shall be performed for each heat, heat treatment load with a wall thickness range of 5 mm and welded with the same WPS.

8. TEST SAMPLING
Samples for production testing shall realistically reflect the properties in the actual components. Test sampling shall be made from an actual fitting or from a prolongation thereof.

9. WELDING
The welding procedure shall be qualified in accordance with ASME IX or EN 288-3 and this MDS:
- The weld consumable alloying content shall be: Mo $\geq 8.0\%$; Cr $\geq 15.0\%$;(Mo + Cr) $\geq 28\%$; C $\leq 0.030\%$; S $\leq 0.015\%$;
- The PQR/WPAR shall be corrosion tested as specified above.

The qualification shall be carried out on the same material grade (UNS number) as used in production. Change of specific make (brand name) of welding consumables requires requalification.

Welding shall be carried out by qualified welders according to qualified procedures approved by a 3rd party organization recognized by an EC member State.

## MATERIAL DATA SHEET

<table>
<thead>
<tr>
<th>TYPE OF MATERIAL:</th>
<th>Austenitic Stainless Steel, Type 6Mo</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>PRODUCT</strong></td>
<td><strong>STANDARD</strong></td>
</tr>
<tr>
<td>Forgings</td>
<td>ASTM A 182</td>
</tr>
</tbody>
</table>

### 1. SCOPE
This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

This MDS is intended for forgings with maximum thickness of 200 mm. For larger thickness special agreements shall be made in each case.

### 2. QUALIFICATION
Manufacturers of product to this MDS shall comply with the requirement of NORSOK Standard M-650.

### 3. STEEL MAKING
The steel melt shall be refined with AOD or equivalent.

### 4. MANUFACTURING PROCESS
The Hot Isostatic Pressed (HIP) process is an acceptable alternative to forging.

### 5. HEAT TREATMENT
The forgings shall be solution annealed followed by water quenching.

### 6. TENSILE TESTING
- $R_{p0.2} \geq 300 \, \text{MPa}$, $R_m \geq 650 \, \text{MPa}$, $A_5 \geq 35 \, \%$

### 7. CORROSION TESTING
Corrosion test according to ASTM G 48 Method A is required. Test temperature shall be 50 °C and the exposure time 24 hours. The corrosion test specimens shall be at the same location as those for mechanical testing. Cut edges shall be prepared according to ASTM G 48 and pickled (20 % HNO₃ + 5 % HF, 60 °C, 5 minute). The acceptance criteria are:
- No pitting at 20 X magnification.
- The weight loss shall be less than 4.0 g/m².

### 8. EXTENT OF TESTING
One set of tensile test and corrosion test shall be carried out for each heat and heat treatment load. The testing shall be carried out on the component with heaviest wall thickness within the load. A test lot shall not exceed 2000 kg for forgings with as forged weight ≤ 50 kg, and 5000 kg for forgings with as forged weight > 50 kg.

### 9. TEST SAMPLING
Samples for production testing shall realistically reflect the properties in the actual components.

Test samples shall be from prolongations on actual component. Sacrificial forgings shall be used for die-forged components. However, special agreements may be made for die-forged components with as forged weight exceeding 50 kg. Integrated blocks shall be used for HIP.

Test location and orientation shall be:
- For forgings having maximum section thickness, $T \leq 50 \, \text{mm}$, the test specimens shall be taken at mid thickness and its mid length shall be at least 50 mm from any second surface.
- For forgings having maximum section thickness, $T > 50 \, \text{mm}$, the test specimen shall be taken at least $1/4 \, T$ from the nearest surface and at least $T$ or 100 mm, whichever is less, from any second surface.

Sketches shall be established showing type, size and location of test samples and extraction of test specimens.
## Material Data Sheet

### 10. Non Destructive Testing
Supplementary requirement ASTM A 961 S56, penetrant testing, shall apply to 10% of all forgings (from the lot as defined for mechanical testing) above NPS 2. The testing shall be carried out after final machining and pickling. The acceptance criteria shall be to ASME VIII, Div. 1, Appendix 8. NDT operator qualification shall be approved by a 3rd party organization recognized by an EC member state.

### 11. Surface Finish
White pickled including machined surfaces.

### 12. Repair of Defects
Weld repair is not acceptable.

### 13. Marking
The component shall be marked to ensure full traceability to melt and heat treatment lot.

### 14. Certification
Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.

</tbody>
</table>

1. **SCOPE**

This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

2. **QUALIFICATION**

Manufacturers of product to this MDS shall comply with the requirement of NORSOK Standard M-650.

3. **STEEL MAKING**

The steel melt shall be refined with AOD or equivalent process. Remelting of AOD or equivalent steel in an electric furnace is acceptable. Use of internal scrap is not acceptable.

4. **HEAT TREATMENT**

Solution annealed at temperature $\geq 1225$ °C.

5. **CHEMICAL**

$P \leq 0.030 \%$

6. **CORROSION TESTING**

Corrosion test according to ASTM G 48 Method A is required. Test temperature shall be 50 °C and the exposure time 24 hours. The corrosion test specimen shall be at the same location as those for mechanical testing. Cut edges shall be prepared according to ASTM G 48 and pickled (20 % HNO3 + 5 % HF, 60 °C, 5 minute). The acceptance criteria are:

- No pitting at 20 X magnification.
- The weight loss shall be less than 4.0 g/m².

7. **EXTENT OF TESTING**

Tensile test and corrosion test shall be made for each melt and heat treatment load. A test lot shall not exceed 5 000 kg.

8. **TEST SAMPLING**

Samples for mechanical testing shall realistically reflect the properties in the actual components. Thickness of the test block shall be equal to the thickness of the actual components up to a maximum thickness of 100 mm. For flanged components the largest flange thickness shall apply.

Test specimens shall be cut from the 1/4 T location from the surface where T is the thickness of the test block.

Test block shall be integrally cast or gated onto the castings and shall not be removed from the castings until after the final quality heat treatment.

9. **NON DESTRUCTIVE TESTING**

**Liquid penetrant testing:** Supplementary requirement S6 shall apply to all surfaces (including internal surfaces) of all castings. The testing shall be carried out after final machining and pickling. The acceptance criteria shall be ASME VIII, Div.1, Appendix 7.

**Radiographic testing:** Supplementary requirement S5 shall apply to:

- Critical areas as per ANSI B 16.34 of the pilot cast of each pattern
- All butt weld ends of each casting
- Class 1500 psi and above; all critical areas to ANSI B16.34 of each casting.

The acceptance criteria shall be to ASME VIII, Div. 1, Appendix 7.

NDT operator qualification shall be approved by a 3rd party organization recognized by an EC member state.

10. **SURFACE FINISH**

White pickled. Shall be carried out after any blasting and shall include finished machined surfaces.
### 11. REPAIR OF DEFECTS

Repair welding shall be carried out with Ni-based consumables with alloying content: Mo $\geq 8.0 \%$; Cr $\geq 15.0 \%$; (Mo + Cr) $\geq 28 \%$; C $\leq 0.030 \%$; S $\leq 0.015 \%$. Welding consumables with matching chemical composition is acceptable provided solution annealing heat treatment after welding. The repair welding procedure shall be qualified in accordance with ASME IX or EN 288-3 and this MDS.
- A cast plate shall be used for the test welding.
- A macro and corrosion test as specified above shall be carried out.
- Change specific make of filler metal (brand name) requires requalification.

All casting with major repairs shall be given a solution heat treatment after welding. Welding shall be carried out by qualified welders according to qualified procedures approved by a 3rd party organization recognized by an EC member State.

### 12. MARKING

The component shall be marked to ensure full traceability to melt and heat treatment lot.

### 13. CERTIFICATION

Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.
# MATERIAL DATA SHEET

## NORSOK Standard

**TYPE OF MATERIAL:** Austenitic Stainless Steel, Type 6Mo

## MDS R17 Rev. 3

<table>
<thead>
<tr>
<th>PRODUCT</th>
<th>STANDARD</th>
<th>GRADE</th>
<th>ACCEPT. CLASS</th>
<th>SUPPL. REQ.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bars</td>
<td>ASTM A 276</td>
<td>UNS S31254, UNS N08367, UNS N08926</td>
<td>-</td>
<td>-</td>
</tr>
</tbody>
</table>

### 1. SCOPE

This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard. This MDS is intended for bars with maximum thickness of 200 mm. For larger thickness special agreements shall be made in each case and based on the result of qualification testing specified in NORSOK M-650.

### 2. QUALIFICATION

Manufacturers of product to this MDS shall comply with the requirement of NORSOK Standard M-650.

### 3. STEEL MAKING

The steel melt shall be refined with AOD or equivalent.

### 4. HEAT TREATMENT

Solution annealing followed by water quenching.

### 5. TENSILE TESTING

\[ \sigma_y \geq 300 \text{ MPa}, \quad R_m \geq 650 \text{ MPa}, \quad A_5 \geq 35 \% \]

### 6. CORROSION TESTING

Corrosion test according to ASTM G 48 Method A is required. Test temperature shall be 50 °C and the exposure time 24 hours. The corrosion test specimens shall be at the same location as those for mechanical testing. Cut edges shall be prepared according to ASTM and pickled (20% HNO₃ + 5% HF, 60 °C, 5 minute). The acceptance criteria are:

- No pitting at 20 X magnification.
- The weight loss shall be less than 4.0 g/m².

### 7. EXTENT OF TESTING

One tensile test and corrosion test shall be carried out for each heat and heat treatment load.

### 8. TEST SAMPLING

Samples for production testing shall realistically reflect the properties in the actual components. Test location and orientation shall be:

- For bars having maximum section thickness, \( T \leq 50 \text{ mm} \), the test specimens shall be taken at mid thickness and its mid length shall be at least 50 mm from any second surface.
- For bars having maximum section thickness, \( T > 50 \text{ mm} \), the test specimen shall be taken at least \( \frac{1}{4} T \) from the nearest surface and at least \( T \) or 100 mm, whichever is less, from any second surface.
- The testing shall be carried out in longitudinal direction. For thickness exceeding 160 mm, the testing shall be carried out both in longitudinal and transverse (tangential) direction. All testing in longitudinal direction shall meet specified requirements (ASTM A 276 and this MDS). For testing in transverse (tangential) direction elongation shall be minimum 20 %.

### 9. SURFACE FINISH

Finished product shall be white pickled.

### 10. REPAIR OF DEFECTS

Weld repair is not acceptable.

</table>

1. SCOPE
This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard. Material grades not included in A 269 shall comply with the test and tolerance requirements given to Grade UNS S31254.

2. QUALIFICATION
Manufacturers of product to this MDS shall comply with the requirement of NORSOK Standard M-650.

3. STEEL MAKING
The steel melt shall be refined by AOD or equivalent.

4. HEAT TREATMENT
The tubes shall be solution annealed followed by water quenching.

5. CORROSION TESTING
Corrosion test according to ASTM G 48 Method A is required. Test temperature shall be 50 °C and the exposure time 24 hours. Test specimens shall have internal and external surfaces in an as-delivered condition (pickling or bright annealing). Cut edges shall be prepared according to ASTM G 48 and the whole specimen shall be pickled (20 % HNO₃ + 5 % HF, 60 °C, 5 minute). The acceptance criteria are:
- No pitting at 20 X magnification.
- The weight loss shall be less than 4.0 g/m².

6. EXTENT OF TESTING
Corrosion testing shall be carried out to the same extent as stated for mechanical tests in the referred standard.

7. TEST SAMPLING
Samples for production testing shall realistically reflect the properties in the actual components.

9. REPAIR OF DEFECTS
Weld repair is not acceptable.

10. MARKING
The component shall be marked to ensure full traceability to melt and heat treatment lot.

11. CERTIFICATION
EN 10 204 Type 3.1B.
Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.

### 1. SCOPE
This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

### 2. MANUFACTURING PROCESS

All welded products: Welding shall be carried out by qualified welders according to qualified procedures approved by a 3rd party organization recognized by a EC member State.

### 3. CHEMICAL COMPOSITION

All products: C ≤ 0.035 %

Welded pipes and plates to A 240: S ≤ 0.015 %

### 4. TENSILE TESTING

Grade 316 L with Rp0.2 ≥ 205 MPa, Rm ≥ 515 MPa and A5 > 35% is acceptable.

### 5. TEST SAMPLING

Samples for production testing shall realistically reflect the properties in the actual component.

### 6. NON DESTRUCTIVE TESTING

Welded pipes to A 358:

Eddy current testing according to ASTM A 450 is acceptable as replacement for spot radiography for wall thickness less than 4.0 mm.

Welded tubes to A 269:

Eddy current testing according to ASTM A 450, section 23 is required.

All products:

NDT operator qualification shall be approved by a 3rd party organization recognized by a EC member State.

### 7. SURFACE FINISH

White pickled. Machined surfaces do not require pickling.

### 8. REPAIR OF DEFECTS

Weld repair of base material is not acceptable.

### 9. MARKING

The product shall be marked to ensure full traceability to melt and heat treatment lot.

### 10. CERTIFICATION

Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

</tbody>
</table>

1. SCOPE

This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

2. EXTENT OF TESTING

Tensile testing is required for each heat and heat treatment load.

3. TEST SAMPLING

For castings with weight 250 kg and above the test blocks shall be integrally cast with the casting. The test blocks shall be heat treated together with the castings they represents. Samples for mechanical testing shall realistically reflect the properties in the actual components.

4. NON DESTRUCTIVE TESTING

**Penetrant testing:** Supplementary requirement S6 shall apply to all surfaces (including internal surfaces) of all castings. The testing shall be carried out after final machining and pickling. The acceptance criteria shall be ASME VIII, Div.1, Appendix 7.

**Radiographic testing:** Supplementary requirement S5 shall apply to:
- Critical areas as per ANSI B16.34 of the pilot cast of each pattern
- All butt weld ends of each casting.
- Class 1500 psi and above; all critical areas according to ANSI B16.34 of each casting.

The acceptance criteria shall be to ASME VIII, Div. 1, Appendix 7. NDT operator qualification shall be approved by a 3rd party organization recognized by an EC member state.

5. REPAIR OF DEFECTS

Welding shall be carried out by qualified welders according to qualified procedures approved by a 3rd party recognized by an EC member State.

6. SURFACE FINISH

White pickled. Machined surfaces do not require pickling.

7. CERTIFICATION

Certification shall affirm compliance with the specification and shall be according to EN 10204 Type 3.1B provided the manufacturer has a quality assurance system certified by a competent body established within the EC, and having undergone a specific assessment for materials.

### 1. SCOPE
This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard. Equivalent Titanium grade (GOST VT 1-0) is acceptable provided the requirements in the referred standard and this MDS is fulfilled.

### 2. CHEMICAL COMPOSITION
Chemical composition other than Grade 2 (GOST VT 1-0) is acceptable.

### 3. HEAT TREATMENT
Wrought fittings to B 363, Forgings to B 381, Plates to B 265 and Bars to B 348: Annealed condition if not the tensile properties in the referred standard can be achieved in as formed condition.

### 4. EXTENT OF TESTING

- **Fittings to B 363:** Tensile test shall be carried out for each heat, heat treatment load, type and size.
- **Products to B 381/B 348:** Tensile test specimen shall be taken from each lot. A lot is defined as all products of the same heat and heat treatment load with a maximum deviation from the test block thickness of 10 mm.

### 5. TEST SAMPLING
All products: Samples for production testing shall realistically reflect the properties in the actual component.

### 6. WELDING
Welded pipes to B 862: Welding procedures shall be qualified in accordance with ASME IX.

### 7. CERTIFICATION
EN 10 204 Type 3.1B.
**MATERIAL DATA SHEET**

**TYPE OF MATERIAL:** Titanium Grade 2

**PRODUCT** | **STANDARD** | **GRADE** | **ACCEPT. CLASS** | **SUPPL. REQ.**
---|---|---|---|---

### 1. SCOPE
This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard. Equivalent Titanium grades (GOST VT 1-0) are acceptable provided the requirements in this MDS is fulfilled.

### 2. QUALIFICATION
Manufacturers of product to this MDS shall be qualified in accordance with NORSOK Standard M-650.

### 3. HOT ISOSTATIC PRESSING
All castings shall be subject to Hot Isostatic Pressing (HIP). HIP may be substituted for required heat treatment provided all requirements are met and the temperature is not detrimental to the material.

### 4. CHEMICAL COMPOSITION
Chemical composition other than Grade 2 (GOST VT 1-0) is acceptable.

### 5. EXTENT OF TESTING
Tensile testing is required for each heat and heat treatment load.

### 6. TEST SAMPLING
Samples for mechanical testing shall realistically reflect the properties in the actual components. For castings with weight 150 kg and above the test blocks shall be integrally cast with the casting. Test samples shall accompany the castings through any heat treatment, chemical cleaning process or any other operation that may alter metallurgical or mechanical properties.

### 7. NON DESTRUCTIVE TESTING
**Penetrant testing:** Supplementary requirement S2 shall apply to all accessible surfaces of all castings. The testing shall be carried out after final machining. The acceptance criteria shall be ASME VIII, Div. 1, Appendix 7.

**Radiographic testing:** Supplementary requirement S1 shall apply to:
- Critical areas as per ANSI B16.34 of the pilot cast of each pattern
- All butt weld ends of each casting.
- Class 1500 psi and above; all critical areas according to ANSI B16.34 of each casting. The acceptance criteria shall be to ASME VIII, Div. 1, Appendix 7.

## MATERIAL DATA SHEET MDS X01 Rev. 1

**TYPE OF MATERIAL:** Low Alloyed Steel Type AISI 4130

<table>
<thead>
<tr>
<th>PRODUCT</th>
<th>STANDARD</th>
<th>GRADE</th>
<th>ACCEPT. CLASS</th>
<th>SUPPL. REQ.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Seamless pipes</td>
<td>ASTM A 519</td>
<td>AISI 4130</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Wrought fittings</td>
<td>ASTM A 234</td>
<td>AISI 4130</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

1. **SCOPE**
   This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

2. **HEAT TREATMENT**
   Fittings and pipes shall be delivered in the liquid quenched and tempered condition. The tempering temperature shall be minimum 650 °C.

3. **MANUFACTURING PROCESS**
   Pipes shall be manufactured by means of the hot finished (HF) sizing method. Only seamless fittings are acceptable.

4. **CHEMICAL COMPOSITION**
   Max. sulphur content: $S \leq 0.025 \%$
   Max. phosphorous content: $P \leq 0.025 \%$

5. **TENSILE TESTING**
   Minimum yield strength: $R_{eh} \geq 415 \text{ MPa}$
   Minimum tensile strength: $R_{m} \geq 620 \text{ MPa}$
   Minimum elongation: $A5 \geq 18 \%$
   Minimum red. of area: $Z \geq 35 \%$

6. **IMPACT TESTING**
   Charpy V-notch impact testing shall be carried out according to ASTM A 370 for thicknesses $t \geq 6 \text{ mm}$. Full sized Charpy V-notch specimens shall be used wherever possible. The notch shall be perpendicular to the surface. The test temperature shall be $-30 \degree \text{C}$. The minimum absorbed energy for full size specimens shall be 42 J average and 30 J single. Reduction factors for subsize specimens shall be: 7.5 mm - 5/6 and 5 mm - 2/3.

7. **EXTENT OF TESTING**
   One set of tensile and impact test shall be carried out for each lot. A lot is defined as all products of the same type, nominal size and wall thickness, produced from the same heat and heat treatment load. For pipes heat treated in continuous furnace the maximum lot size shall be 60 m.

8. **TEST SAMPLING**
   Samples for production testing shall realistically reflect the properties in the actual component.
   **Fittings:** According to supplementary requirement S2.

9. **NON DESTRUCTIVE TESTING**
   Pipes: All pipes shall be 100 % tested in accordance with API 5L supplementary requirement 4 (SR4). Alternatively, ultrasonic testing according to SEL 1915 may be carried out.
   **Fittings:** Fittings shall be 100 % magnetic particle tested in accordance with ASME VIII, div. 1, Appendix 6.

10. **REPAIR OF DEFECTS**
    Weld repair is not acceptable.

11. **MARKING**
    The component shall be marked to ensure full traceability to melt and heat treatment lot.

12. **CERTIFICATION**
    EN 10 204 Type 3.1B. Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.

<td>PRODUCT</td>
<td>STANDARD</td>
<td>GRADE</td>
</tr>
<tr>
<td>forgings</td>
<td>ASTM A 788</td>
<td>AISI 4140</td>
</tr>
</tbody>
</table>

1. **SCOPE**

This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

2. **MANUFACTURING PROCESS**

The forgings shall be finished hot-worked.

3. **HEAT TREATMENT**

The forgings shall be austenitised, liquid quenched and tempered.

4. **CHEMICAL COMPOSITION**

According to ASTM A 29, AISI 4140

5. **TENSILE TESTING**

Minimum yield strength: $\text{Reh} \geq 620 \text{ MPa}$

Minimum tensile strength: $\text{Rm} \geq 850 \text{ MPa}$

Minimum elongation: $\text{A5} \geq 15 \%$

6. **IMPACT TESTING**

Charpy V-notch testing is required according to ASTM A 370 at -30 °C. The nooth shall be perpendicular to the surface. The minimum absorbed energy for full size specimens shall be 42 J average and 30 J single.

7. **EXTENT OF TESTING**

One set of tensile and impact test shall be carried out for each melt, section thickness +/- 25 % and heat treatment load.

8. **TEST SAMPLING**

Samples for production testing shall realistically reflect the properties in the actual component.

Test samples shall be from prolongations on actual components. Sacrificial forgings shall be used for die forged components. However, special agreements may be made for die forged components with as forged weight exceeding 50 kg.

Test specimens shall be cut at the 1/4 T location from the surface where T is the thickness of the test samples as heat treated. Sketches shall be established showing type, size and location of test samples and extraction of test specimens.

9. **NON DESTRUCTIVE TESTING**

Supplementary Requirement, S18, magnetic particle tested, shall apply to 10 % of all forgings (from the lot as defined for mechanical testing). The acceptence criteria shall be to ASME VIII, Div. 1, Appendix 6.

10. **REPAIR OF DEFECTS**

Weld repair is not acceptable.

11. **MARKING**

The component shall be marked to ensure full traceability to melt and heat treatment lot.

12. **CERTIFICATION**

EN 10 204 Type 3.1B

Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.
## 1. SCOPE
This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

## 2. IMPACT TESTING
Charpy V-notch testing is required according to ASTM A 370 at -30 °C. The notch shall be perpendicular to the surface. The minimum absorbed energy shall be 42 J average (of 3 specimens) and 30 J single value.

## 3. EXTENT OF TESTING
One set of tensile and impact test is required for each melt and heat treatment load. A test lot shall not exceed 5000 kg.

## 4. TEST SAMPLING
Samples for mechanical testing shall realistically reflect the properties in the actual components. Thickness of the test block shall be equal to the thickness of the actual components up to a maximum thickness of 100 mm. For flanged components the largest flange thickness shall apply.

Test specimens shall be cut from the 1/4 T location from the surface where T is the thickness of the test block.

Test block shall be integrally cast or gated onto the castings and shall not be removed from the castings until after the final quality heat treatment.

## 5. NON DESTRUCTIVE TESTING

### Magnetic particle testing:
Supplementary requirement S4 shall apply to all accessible surfaces of all castings. The examination shall be carried out after machining. The acceptance criteria shall be to ASME VIII, Div. 1, Appendix 7.

### Radiographic testing:
Supplementary requirement S5 shall apply to:
- Critical areas as per ANSI B16.34 of the pilot cast of each pattern.
- All butt weld ends of each casting.
- Class 1500 psi and above; all critical areas to ANSI B16.34 of each casting.

The acceptance criteria shall be to ASME VIII, Div. 1, Appendix 7.

## 6. REPAIR OF DEFECTS
All weld repairs shall be post weld heat treated. The repair welding procedure qualification shall include the following:

- qualification on a cast plate of the same grade
- one set of impact test (3 specimens), shall be taken from weld metal and fusion line.

## 7. MARKING
The component shall be marked to ensure full traceability to melt and heat treatment lot.

## 8. CERTIFICATION
EN 10 204 Type 3.1B. Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.

1. SCOPE
This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

2. MANUFACTURING PROCESS
The flanges shall be forged to shape. Flanges machined out of bar and or plate are not accepted.

3. HEAT TREATMENT/DELIVERY CONDITION
The flanges shall be austenitised, liquid quenched and tempered.

4. CHEMICAL COMPOSITION
The steel chemistry shall comply with the requirements of AISI 4130, however modified in accordance with the requirements PSL 3 given in table 404.6 of API 6A. The chemical composition shall be agreed.

5. IMPACT TESTING
Charpy V-notch testing at -30 °C is required. The minimum absorbed energy for full size specimens shall be 42 J average and 30 J single.

6. EXTENT OF TESTING
One set of tensile and impact test shall be carried out for each melt, section thickness according to API 6A, PSL 3, and heat treatment load. A test lot shall not exceed 2000 kg.

7. TEST SAMPLING
Samples for production testing shall realistically reflect the properties in the actual component.

Test samples shall be from prolongations on actual components. Sacrificial forgings shall be used for die forged components. However, special agreements may be made for die forged components with as forged weight exceeding 50 kg.

Test specimens shall be cut at the 1/4 T location from the surface where T is the thickness of the test samples as heat treated. Sketches shall be established showing type, size and location of test samples and extraction of test.

8. DIMENSIONAL TOLERANCES
Flanges to MSS SP-44 shall have a maximum wall thickness under tolerance of 0.3 mm for the hub at the welding end.

9. NON DESTRUCTIVE TESTING
NDT shall be carried out after final heat treatment:
- 100 % MT according to ASME VIII, Div.1, App.6, shall be carried out.
- 100 % UT according to ASTM A 388, shall be carried out. The acceptance criteria shall be according to ASTM A 388 para 8.

10. REPAIR OF DEFECTS
Weld repair is not acceptable.

11. MARKING
The component shall be marked to ensure full traceability to melt and heat treatment lot.

12. CERTIFICATION
EN 10 204 Type 3.1B. Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.

Flanges to MSS SP-44 shall have a maximum wall thickness under tolerance of 0.3 mm for the hub at the welding end.

7. **NON DESTRUCTIVE TESTING**

Supplementary Requirement, S4, Magnetic Particle testing, shall apply to 10 % of all forgings (from the lot as defined for mechanical testing). The acceptance criteria shall be to ASME VIII, Div. 1, Appendix 6.

8. **REPAIR OF DEFECTS**

Weld repair of base material is not acceptable.

9. **MARKING**

The component shall be marked to ensure full traceability to melt and heat treatment lot.

10. **CERTIFICATION**

EN 10 204 Type 3.1B. Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.
**MATERIAL DATA SHEET**

**MDS X06**

**Rev. 1**

| **TYPE OF MATERIAL:** High Strength Low Alloy Steel for application down to -46 °C |
| Castings |

1. **SCOPE**
   - This MDS specifies the selected options in the referred standard and additional requirements which shall be added or supersede the corresponding requirements in the referred standard.

2. **CHEMICAL COMPOSITION**
   - C ≤ 0.14 %; Si ≤ 0.50 %; Mn = 1.30-1.60 %; Cr ≤ 0.20 %; Ni = 0.90-1.10 % and Mo = 0.15-0.25 %

3. **IMPACT TESTING**
   - Charpy V-notch testing is required according to ASTM A 370 at -46 °C. The notch shall be perpendicular to the surface. The minimum absorbed energy shall be 42 J average (of 3 specimens) and 30 J single value.

4. **EXTENT OF TESTING**
   - One set of tensile and impact test is required for each melt and heat treatment load. A test lot shall not exceed 5000 kg.

5. **TEST SAMPLING**
   - Samples for mechanical testing shall realistically reflect the properties in the actual components. Thickness of the test block shall be equal to the thickness of the actual components as heat treated up to a maximum thickness of 100 mm. For flanged components the largest flange thickness apply.
   - Test specimens shall be cut from the 1/4 T location from the surface where T is the thickness of the test block.
   - Test block shall be integrally cast or gated onto the castings and shall not be removed from the castings before after the final quality heat treatment.

6. **NON DESTRUCTIVE TESTING**
   - Magnetic particle testing: Supplementary requirement S4 shall apply to all accessible surfaces of all castings. The examination shall be carried out after machining. The acceptance criteria shall be to ASME VIII, Div. 1, Appendix 7.
   - Radiographic testing: Supplementary requirement S5 shall apply to:
     - critical areas as per ANSI B16.34 of the pilot cast of each pattern
     - all butt weld ends of each casting
     - Class 1500 psi and above; all critical areas to ANSI B16.34 of each casting.
   - The acceptance criteria shall be to ASME VIII, Div. 1, Appendix 7.

7. **REPAIR OF DEFECTS**
   - All weld repairs shall be post weld heat treated. The repair welding procedure qualification shall include the following:
     - qualification on a cast plate of the same grade
     - one set of impact test (3 specimens) shall be taken from weld metal and fusion line.

8. **MARKING**
   - The component shall be marked to ensure full traceability to melt and heat treatment lot.

9. **CERTIFICATION**
   - EN 10 204 Type 3.1B. Heat treatment temperature, soaking time and cooling medium should be stated in the certificate.
